

Jason Haga

Senior Researcher

National Institute of Advanced Industrial Science and Technology

Jason Haga is Senior Research Scientist with over 20 years of experience in interdisciplinary projects, spanning a wide range of data-intensive problems using innovative technologies.

His skills and experiences include immersive visualization and analytics for natural disaster management, Bioinformatics workflow and visualization for large-scale virtual screenings to discover new, small molecule inhibitors, persistent identifiers for rice genomics research and award winning innovative technology projects for cultural heritage.

Jason Haga has mentored over 200 students in real-world, problem based learning, research projects. He participated in steering committees, program committees, and board of directors and has actively built and sustained international research collaborations.
