New Coast Bathymetry Based on Wave Characteristics - Inverse Methods:

Case Study

Sandra Fernández-Fernández

Porto (Portugal)

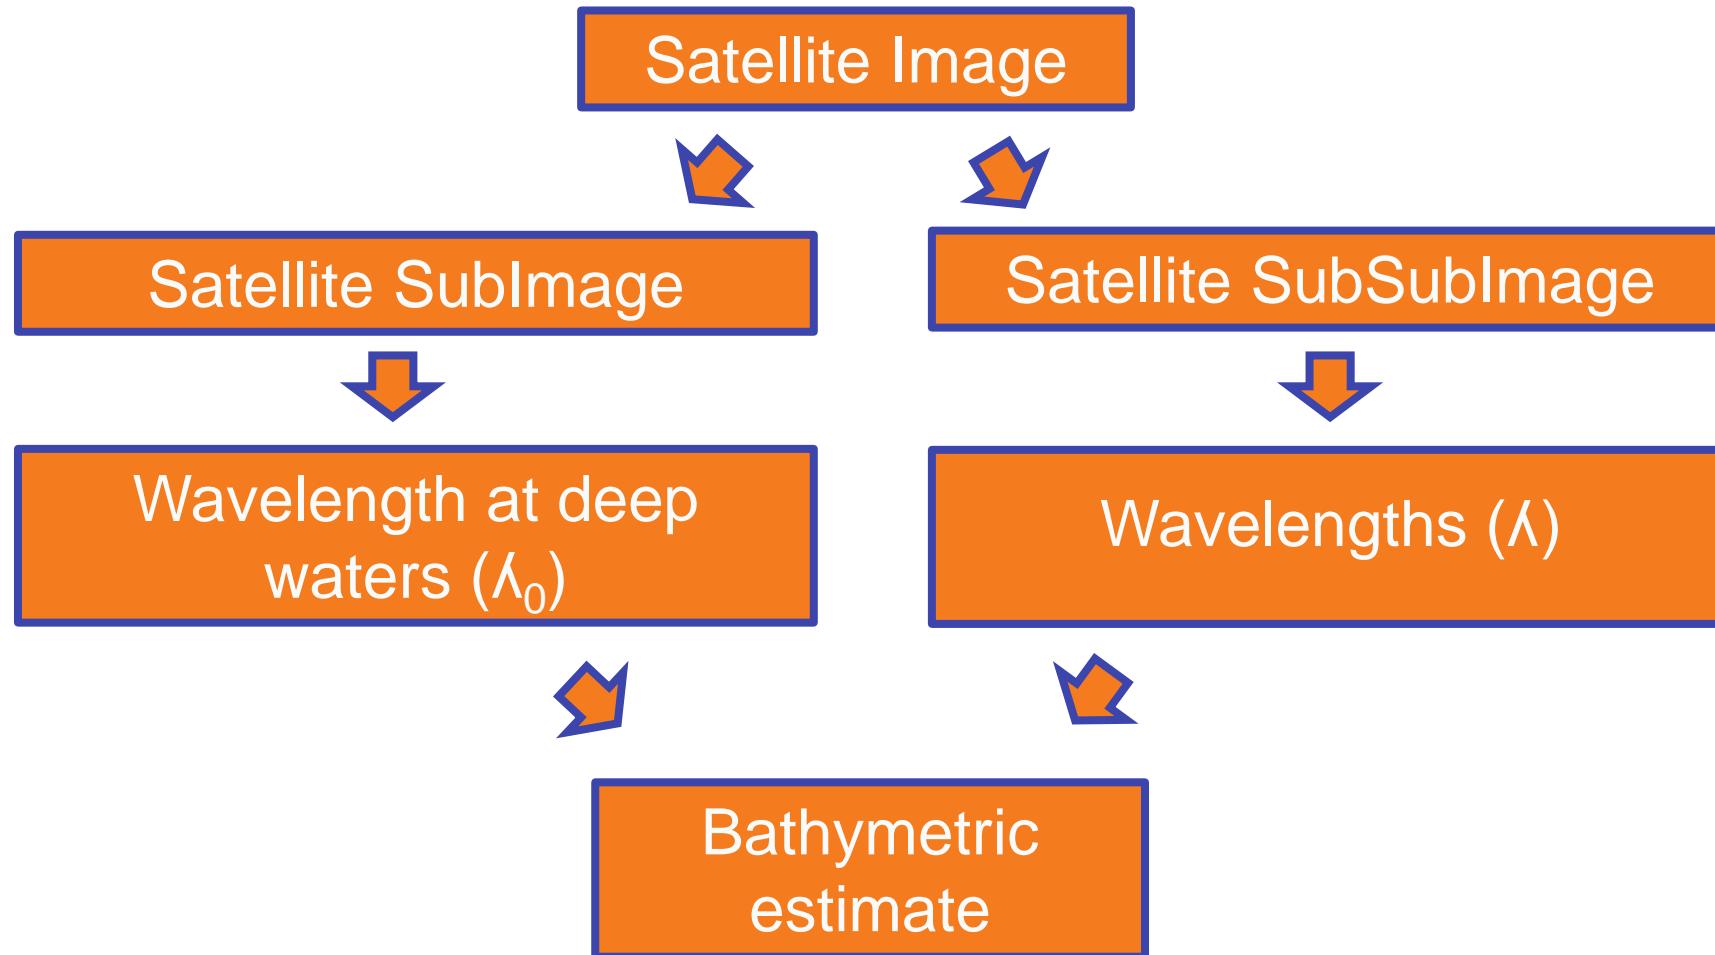

12/11/2019

- How do we obtain the data?
- How do we obtain the subimage?
- How do we estimate the wavelength at deep waters?
- How do we estimate the depth?
- How do we know if the result is realistic?

Methodology approach

How do we obtain the data?

Satellite Platform Product Type

A map of Spain and Portugal with a yellow rectangle highlighting a specific region in the northwest. The map shows major cities like Madrid, Barcelona, and Lisbon, along with rivers and coastlines. A legend in the top right corner of the map interface includes icons for zoom, orientation, and other map controls.

Collection:

The map displays a yellow rectangular overlay covering parts of northern Spain and southern Portugal, specifically the regions around Galicia, Castile and Leon, and the Alentejo. Major cities labeled include Santiago de Compostela, Pontevedra, Vigo, Ourense, Braga, Viana do Castelo, Coimbra, Leiria, Santarém, Lisboa, Viseu, Guarda, Castelo Branco, Portalegre, Cáceres, Badajoz, Mérida, Ciudad Real, Toledo, Madrid, Avila, Valladolid, Zamora, Palencia, Burgos, Logroño, Pamplona, Vitoria-Gasteiz, and Alcalá de Henares.

How do we obtain the subimages?

GetSubImages.m

GetSubImages.m

Input arguments:

ImageFilename

```
ImageFilename='sentinel_76d6.tiff';
```

GridFilename

- `load('gcp_76d6.txt');`
- `XA=gcp_76d6(:,1);`
- `YA=gcp_76d6(:,2);`
- `LON=gcp_76d6(:,3);`
- `LAT=gcp_76d6(:,4);`

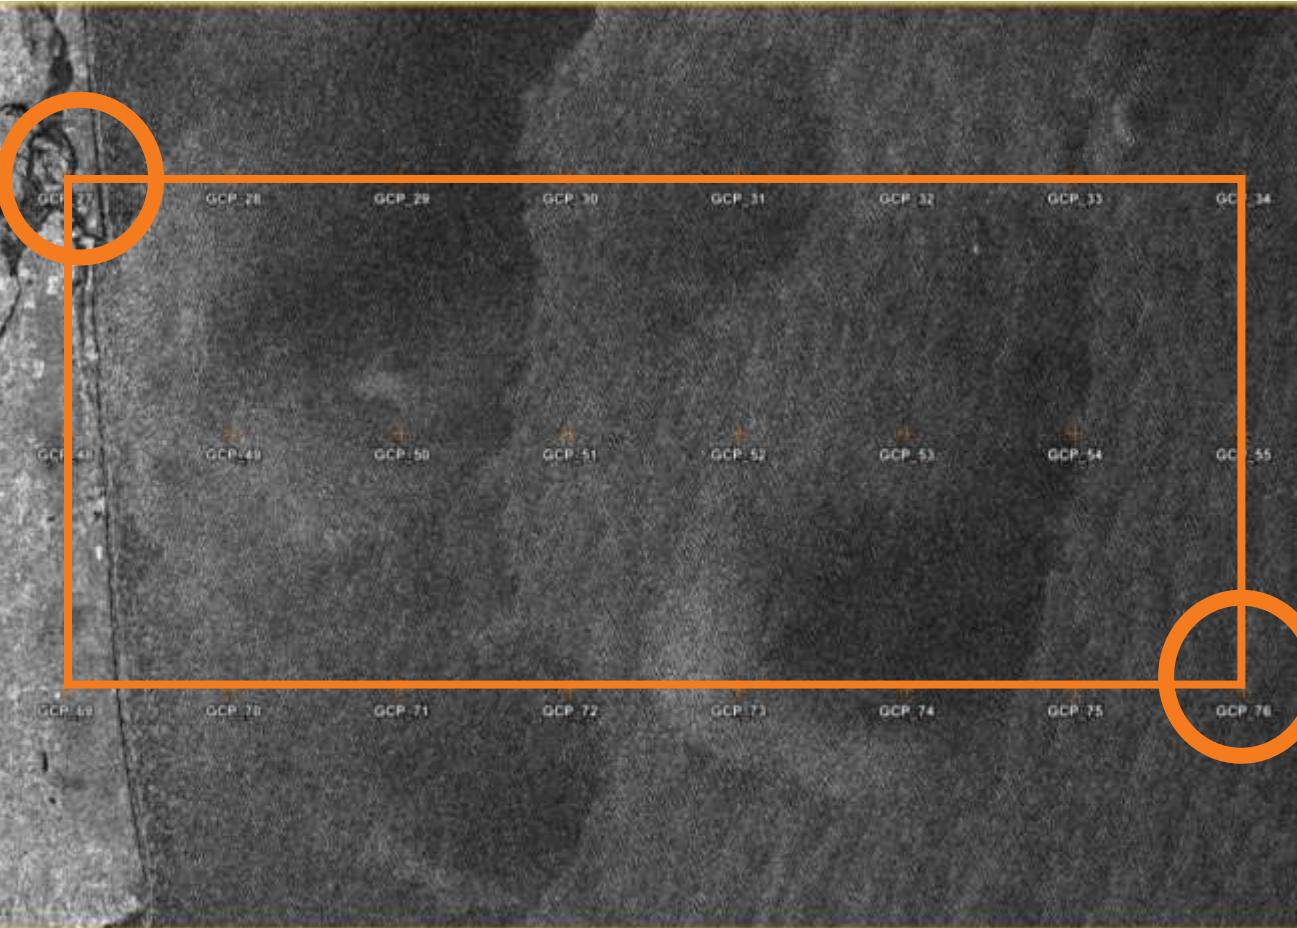

GetSubImges.m

Input arguments:

Coordinates of the selected SubImage

lat1=40.6836;
long1=-8.7135;

lat2=40.4664;
long2=-9.868;

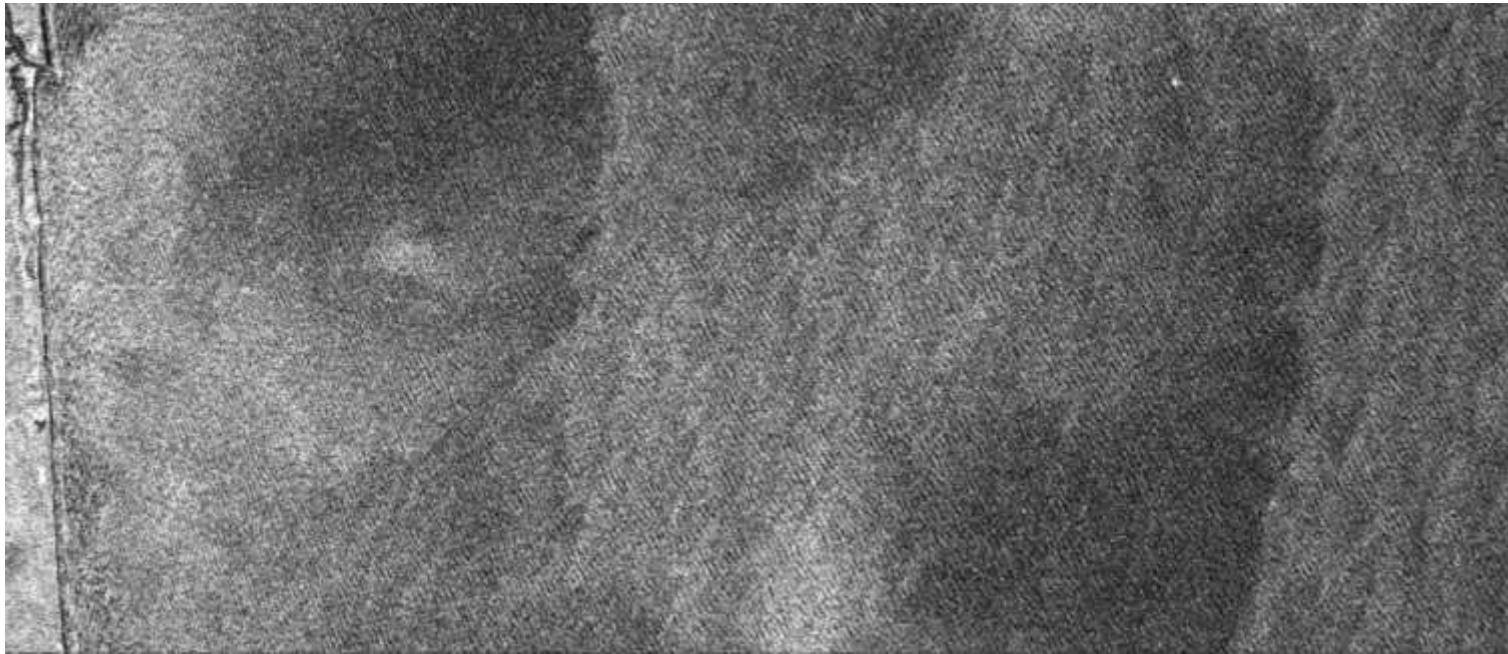

GetSubImages.m

Output arguments:

SubImage – tiff file

SubImage – txt file

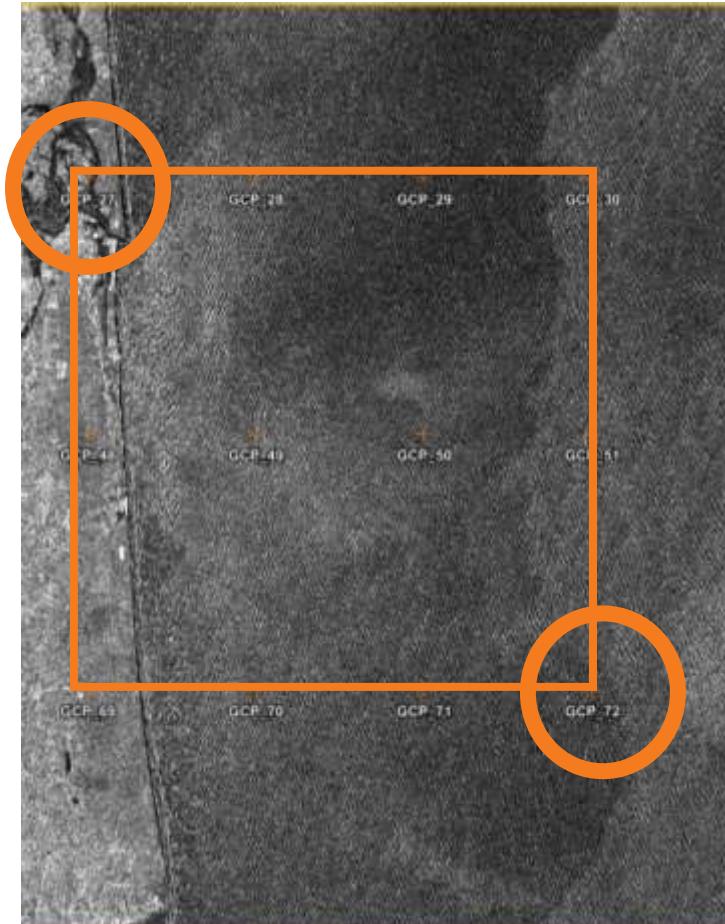

GetSubImges.m

Input arguments:

Coordinates of the selected SubSubImage

lat1=40.6836;
long1=-8.7135;

lat2=40.3857;
long2=-9.257;

GetSubImges.m

Output arguments:

- SubSubImage – tiff file**

- SubSubImage – txt file**

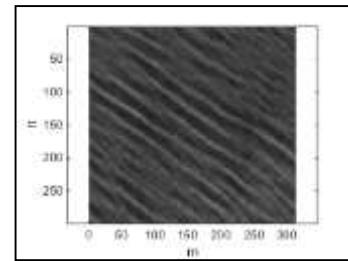

How do we estimate the wavelength at deep waters?

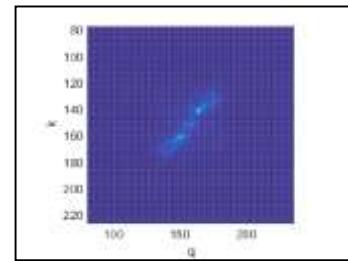

CalcWavelengthGrid.m

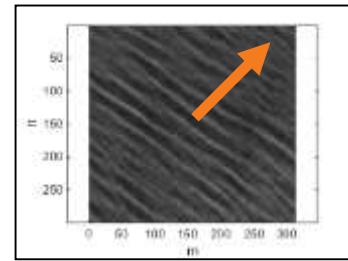

1st Detection of the wave front

2nd Directional spectrum FFT

3rd Wavelength and wave direction

CalcWavelengthGrid.m

Input arguments:

- ImageFilename** - string with the filename of the image file to be analyzed.
- MetersPerPixel** - scalar indicating the size, in meters, of one image pixel.
- CellSize** - length, in meters, of the side of each squared section that will be considered in dividing the image.
- GridSpacing** - spacing, in meters, between two consecutive squared sections in which the image is divided.

```
[X,Y,Lambda0,Alpha,Quality]=CalcWavelengthGrid('SubImage001.tiff',10,4000,500);
```

CalcWavelengthGrid.m

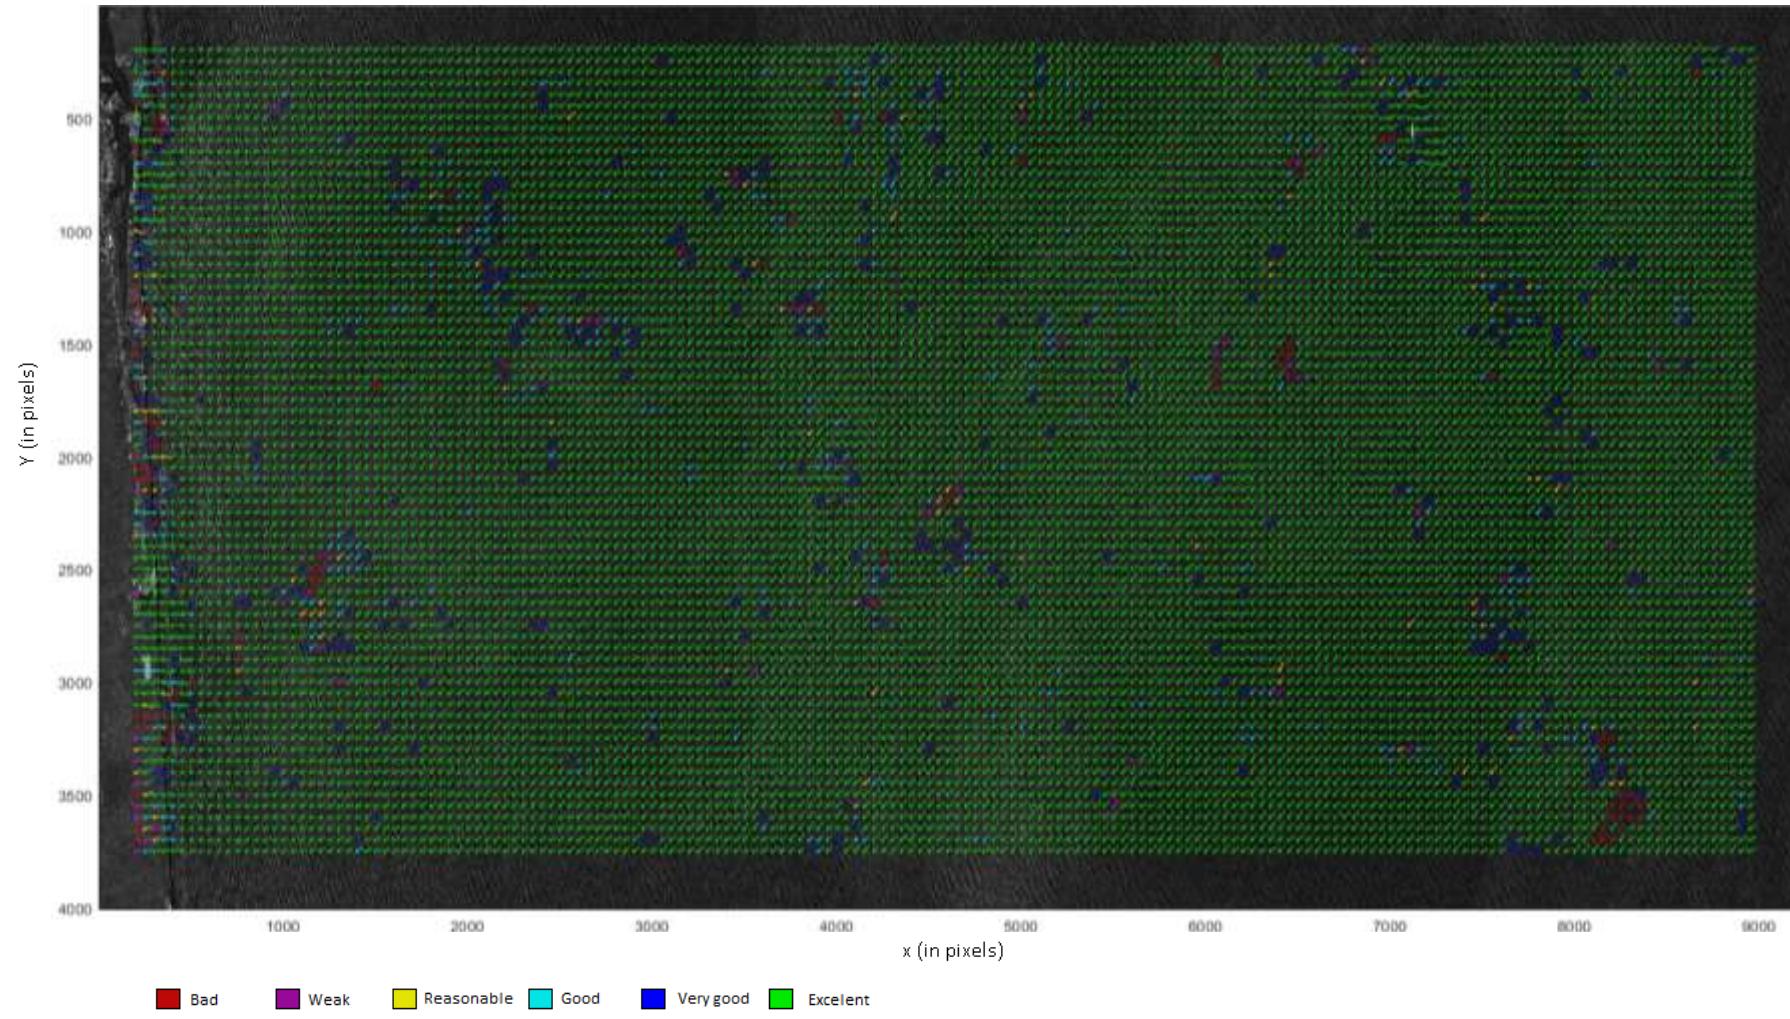

Ouput arguments:

- **X** - matrix (RxC) with the horizontal position, in meters, of the centers of the image sections that were considered for processing.
- **Y** - same as X, but for the vertical coordinate.
- **Lambda0** - matrix (RxC) with the determined wavelengths of the sea waves for each image section (wavelength given in meters).
- **Alpha** - matrix (RxC) with the wave direction for each section, in degrees.
- **Quality** - matrix (RxC) with a value indicating the quality of the obtained solution for each section, according to the sharpness of the FFT results.

CalcWavelengthGrid.m

CalcWavelengthGrid.m

```
Quality0_5=Quality;  
Quality0_5 (Quality <5)=NaN;  
  
Lambda0_5=Lambda0;  
Lambda0_5 (Quality <5)=NaN;  
  
Lambda05=[ reshape (Lambda0_5,m*n,1) ] ;
```

PixelToGroundCoordinates.m

Input arguments:

- **xp** - matrix (Nx2) with the image coordinates of N selected pixels, in the format: [n m] where
 - n is the horizontal coordinate (in pixels)
 - m is the vertical coordinate (in pixels)

□ GridFilename

```
p=10;  
X=X./p;  
Y=Y./p;  
  
Grid_point_initial_X=7902;  
Grid_point_initial_Y=2004;  
[m n]=size (X);  
  
xp=[reshape(X+Grid_point_initial_X,m*n,1) reshape(Y+Grid_point_initial_Y,m*n,1)];  
  
[xg]=PixelToGroundCoords(xp,'gcp_subimagem_76d6.txt');
```

PixelToGroundCoordinates.m

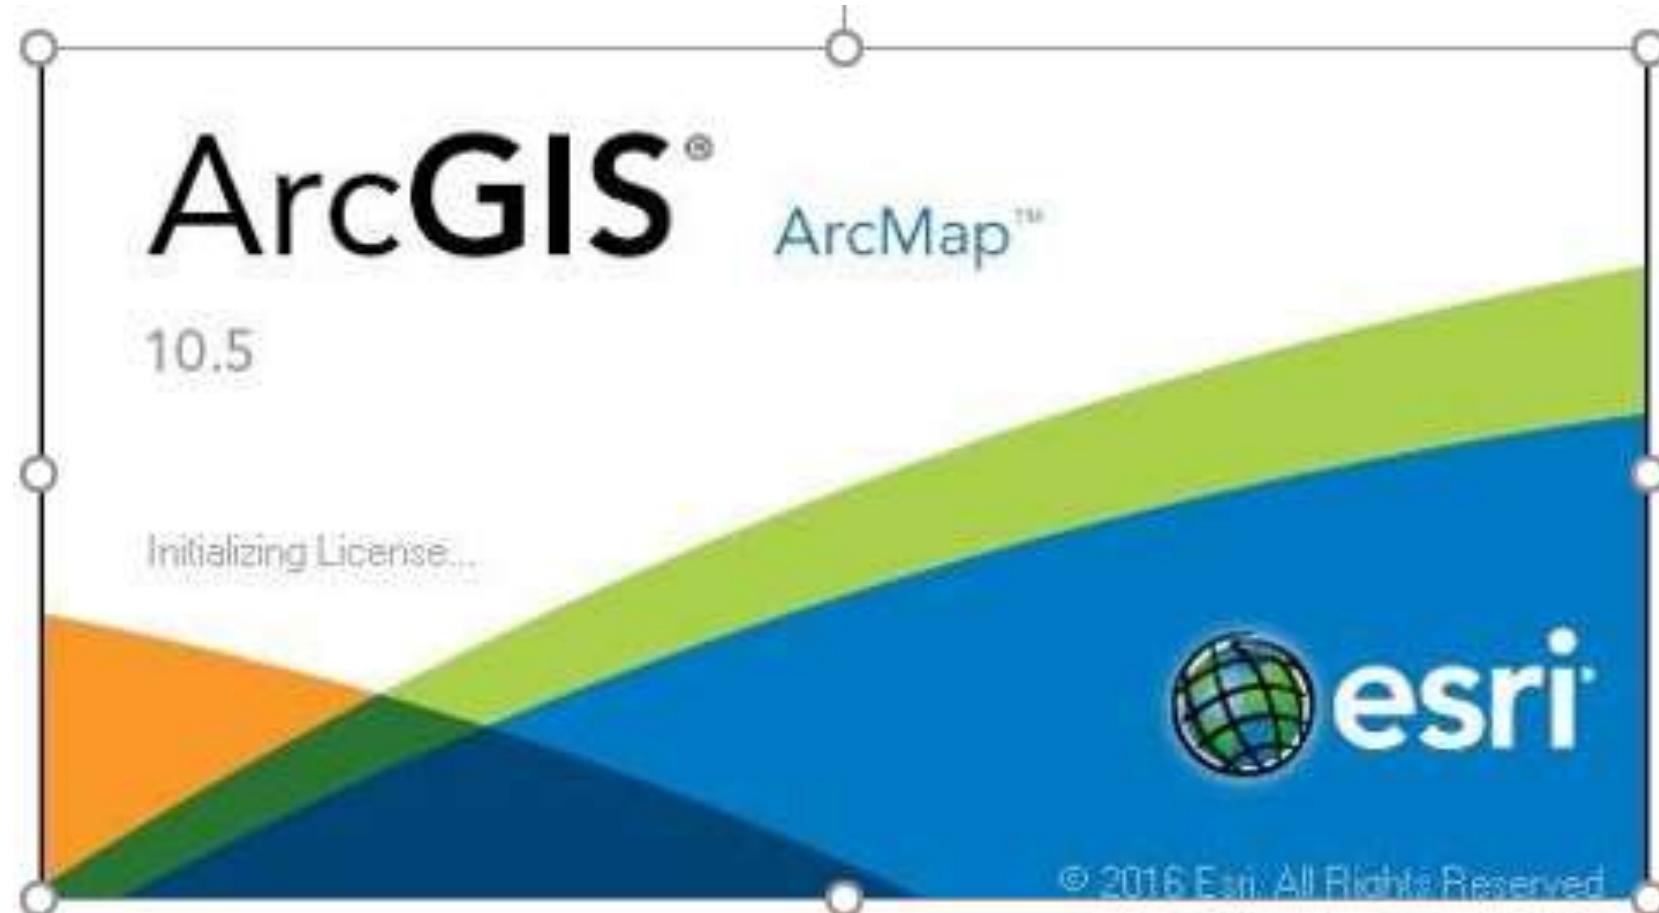

Output argument:

- xg** - matrix (Nx2) with the calculated ground coordinates corresponding to the respective image pixels of xp (in the same units provided in the grid file).

```
Xg=xg(:,1)%Longitude  
Yg=xg(:,2)%Latitude
```

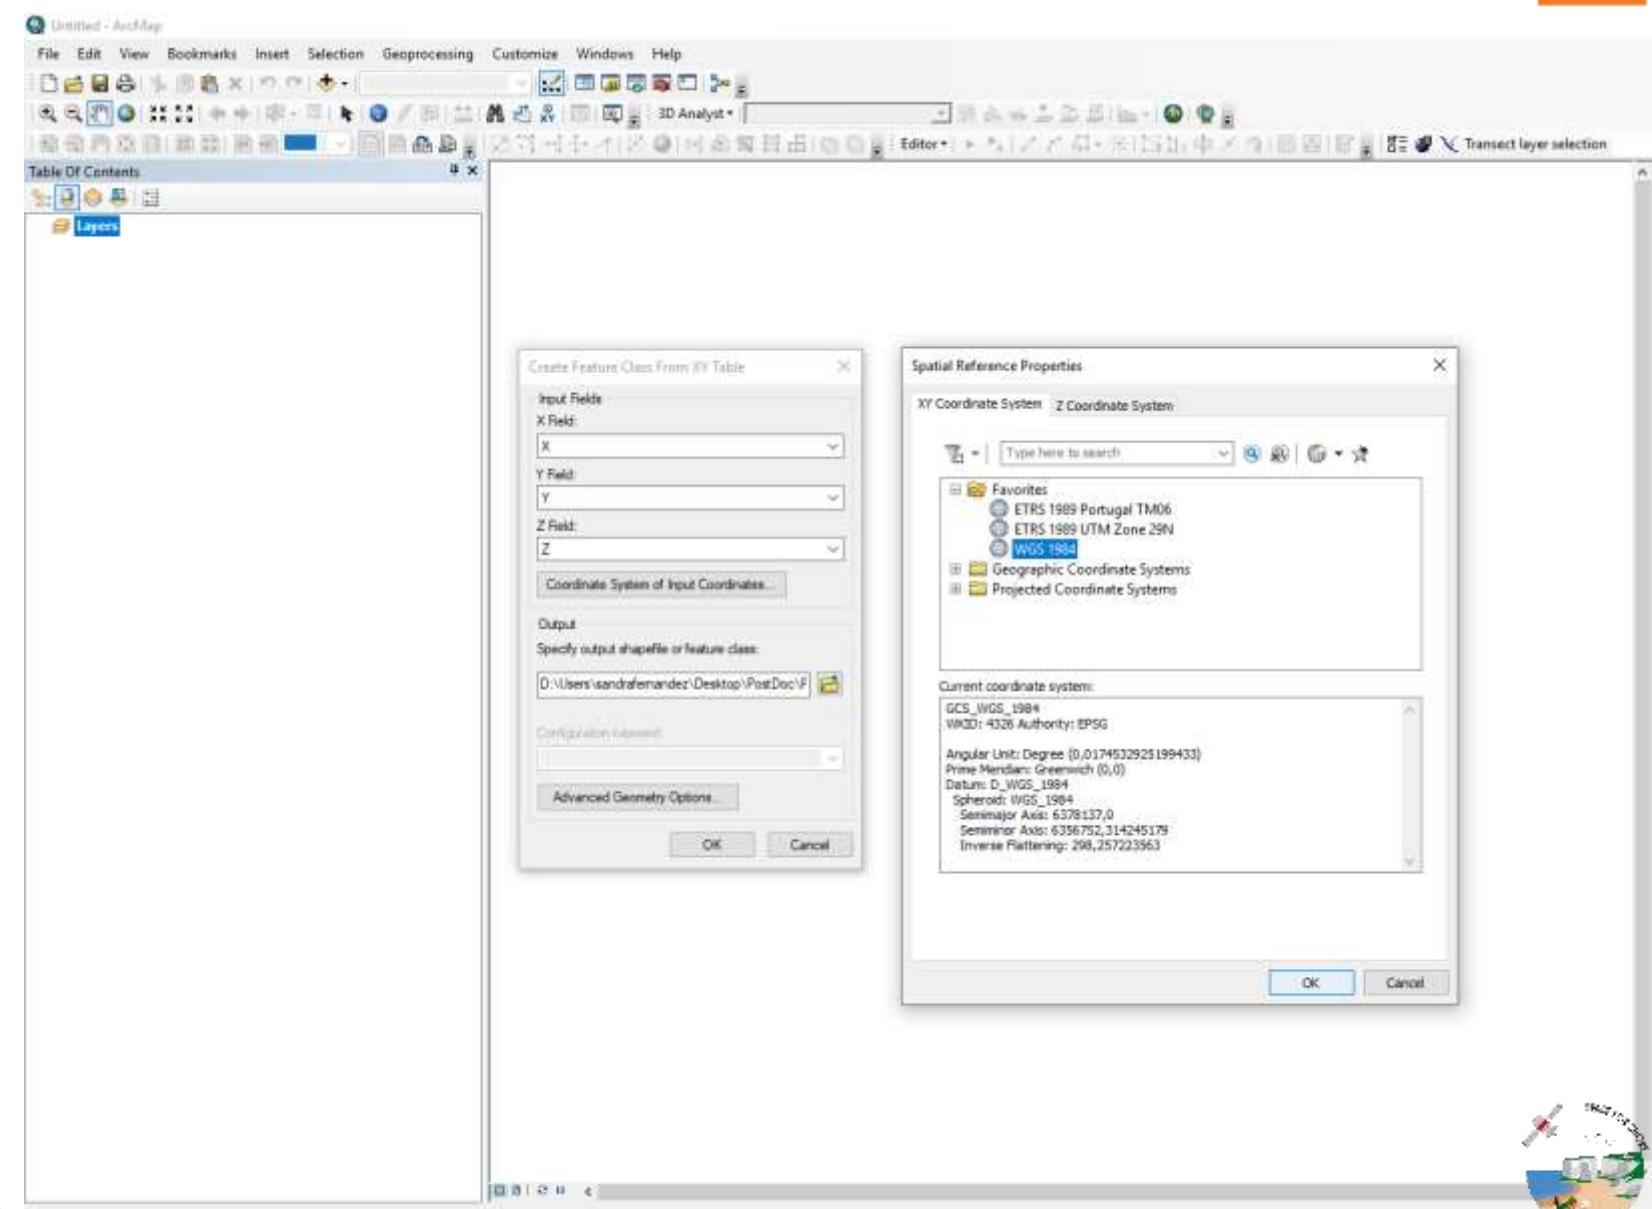

```
Lambda0_5_76d6_GCP27_76_cell4000=[Xg Yg Lambda05];
```

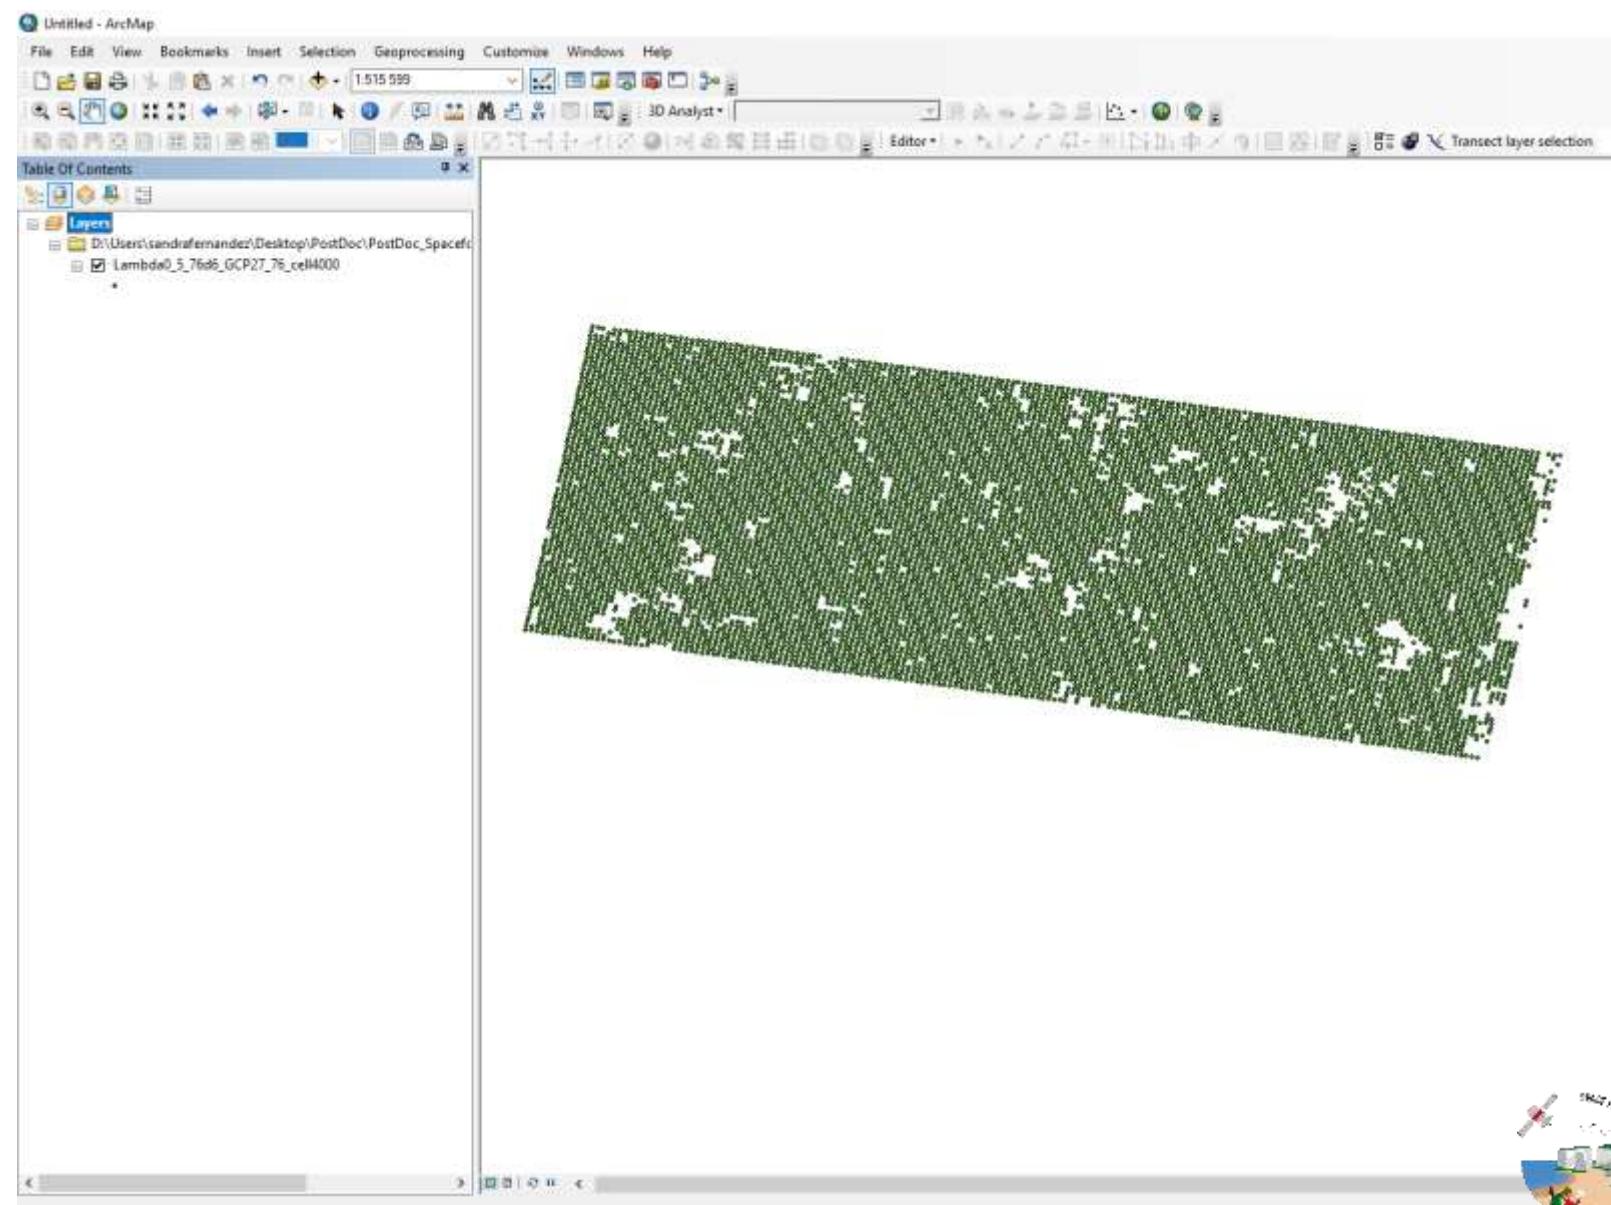

Input file: Lambda0_5_76d6_GCP27_76_cell14000.txt

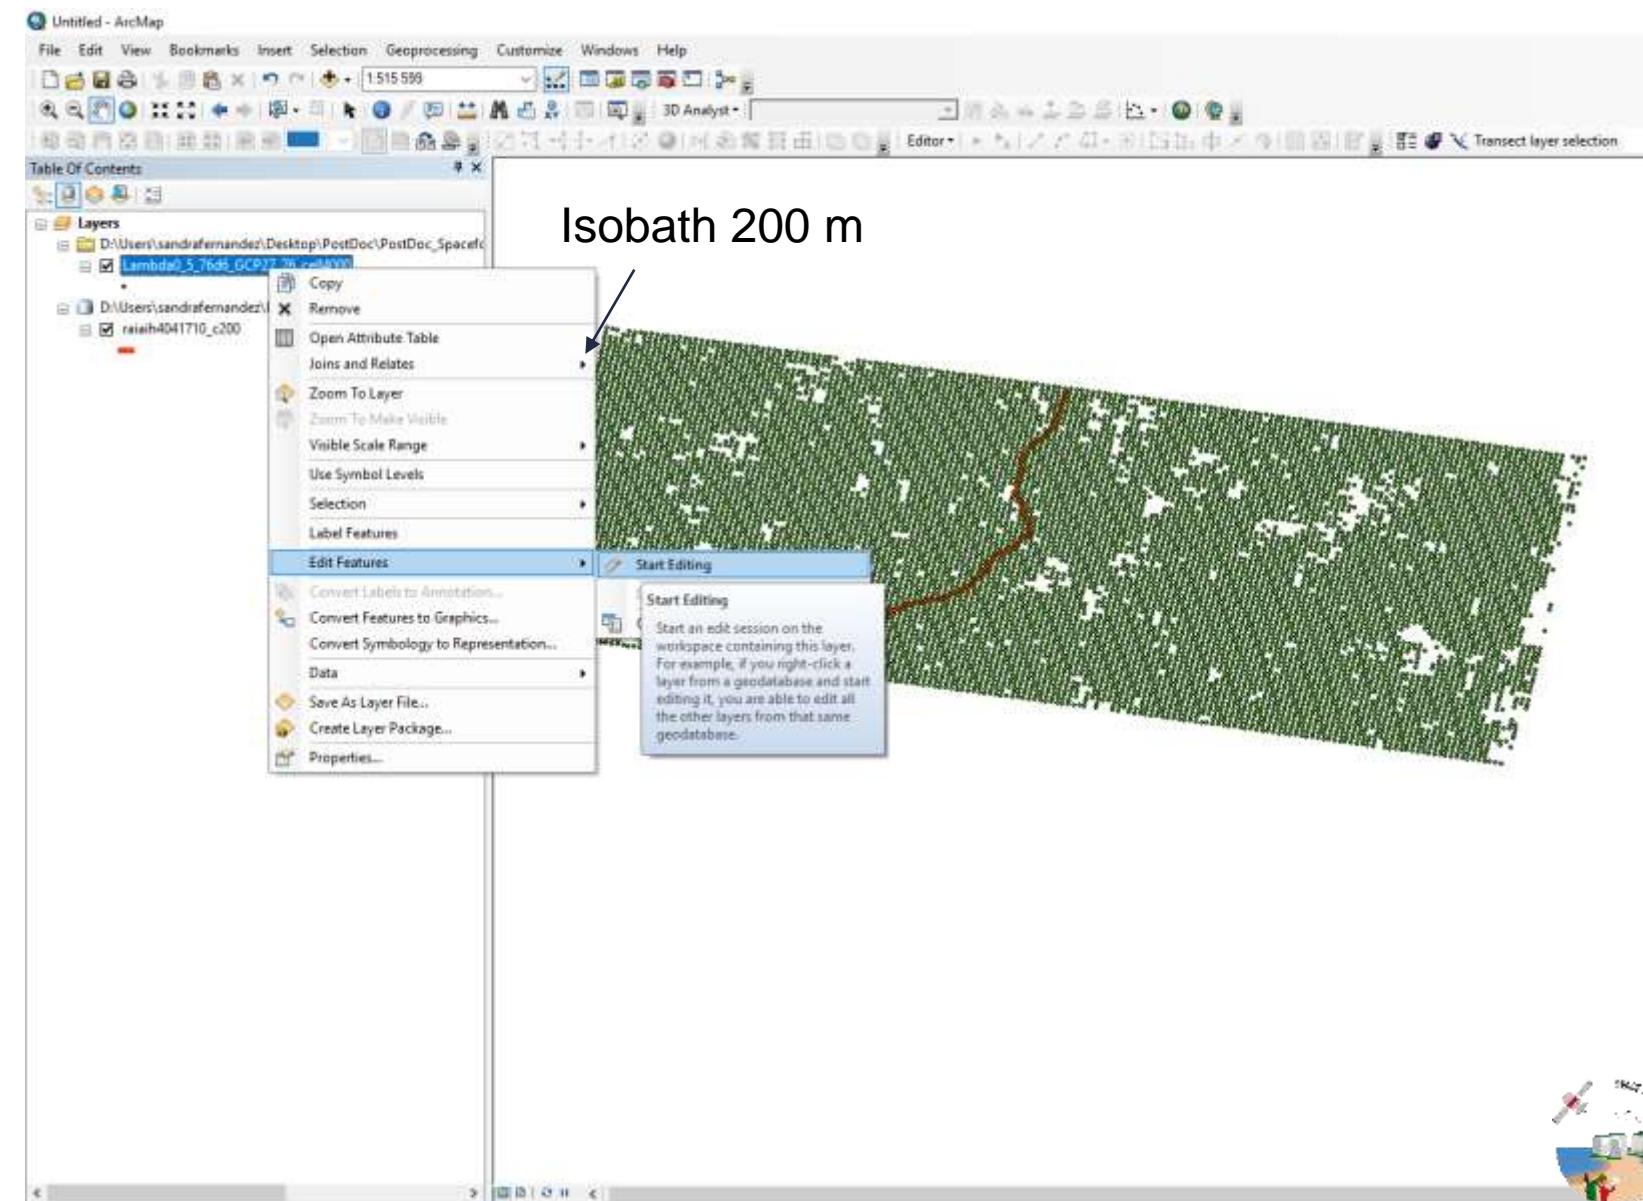

Output file: Lambda0_5_76d6_GCP27_76_cell4000.shp

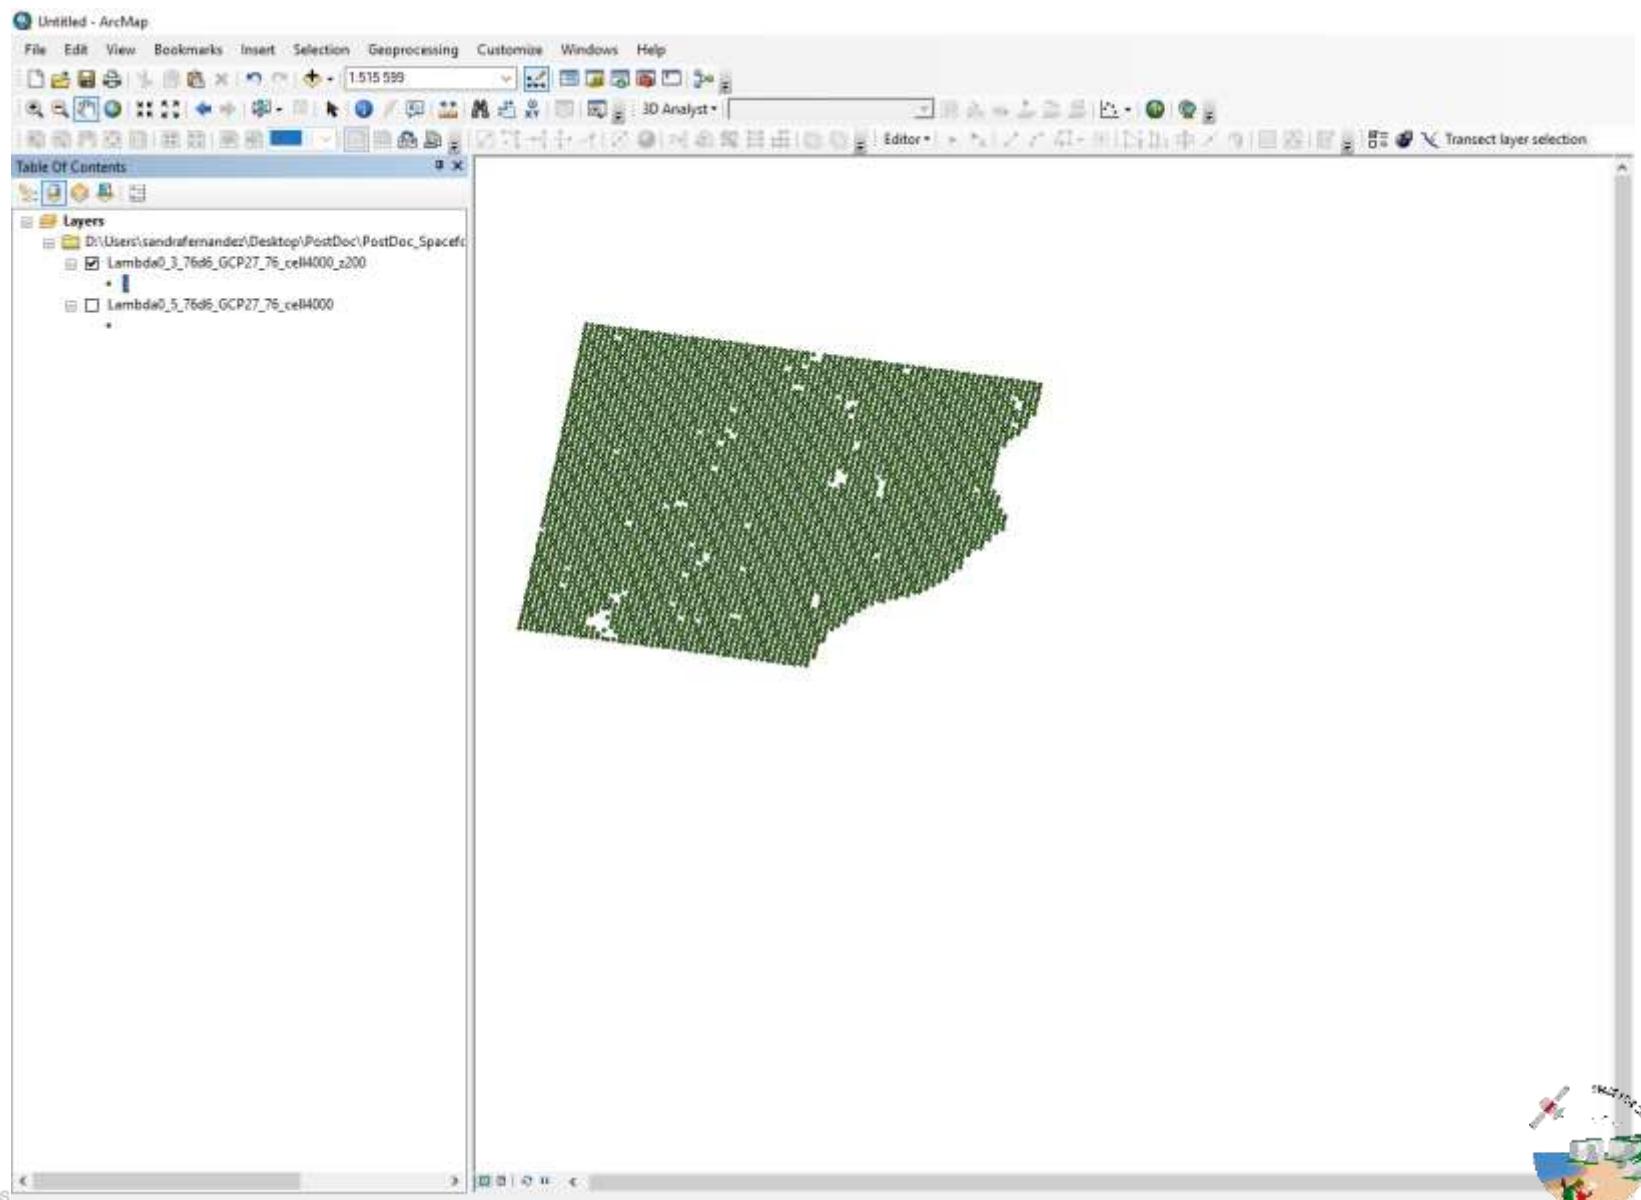

Input/Output file: Lambda0_5_76d6_GCP27_76_cell4000_z200.shp

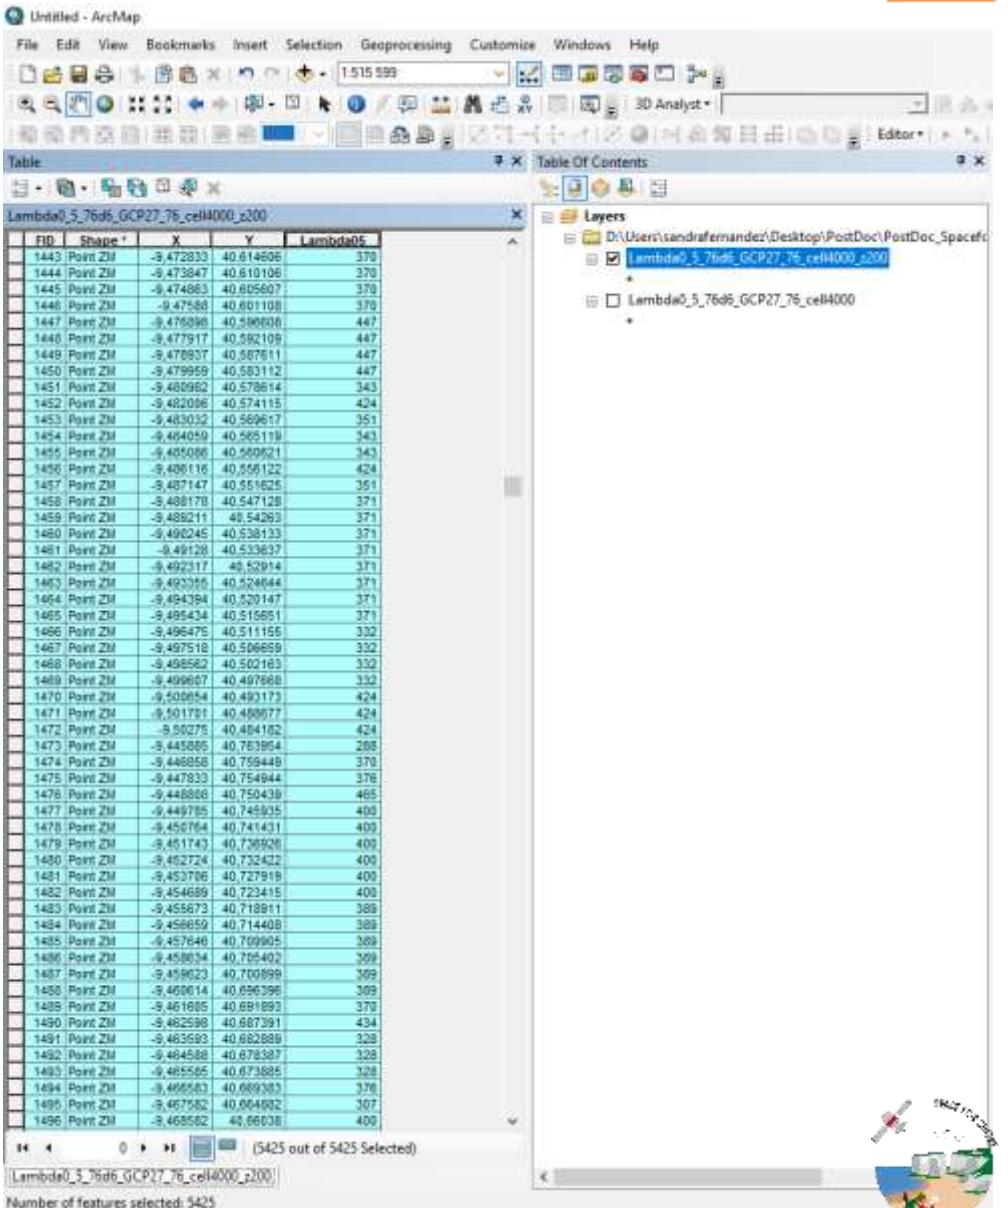

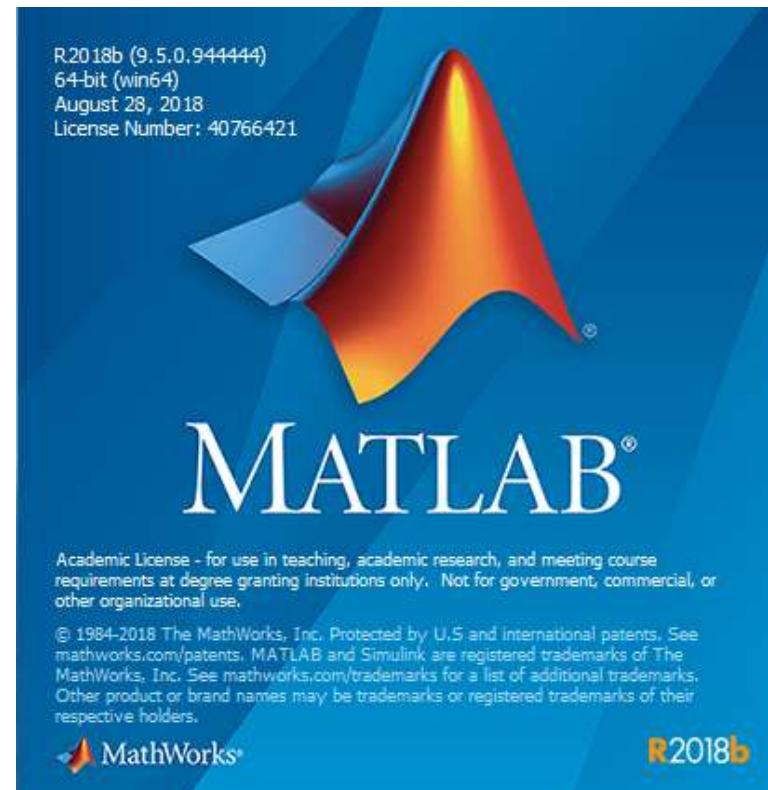

Output file: Lambda0_5_76d6_GCP27_76_cell4000_z200.shp

Output file: Lambda0_5_76d6_GCP27_76_cell4000 z200.txt

```
F=load('Lambda0_5_76d6_GCP27_76_cel14000_z200.txt');  
  
Lambda0_5_z200=F(:,5);  
  
Lambda0=nanmean(Lambda0_5_z200);
```

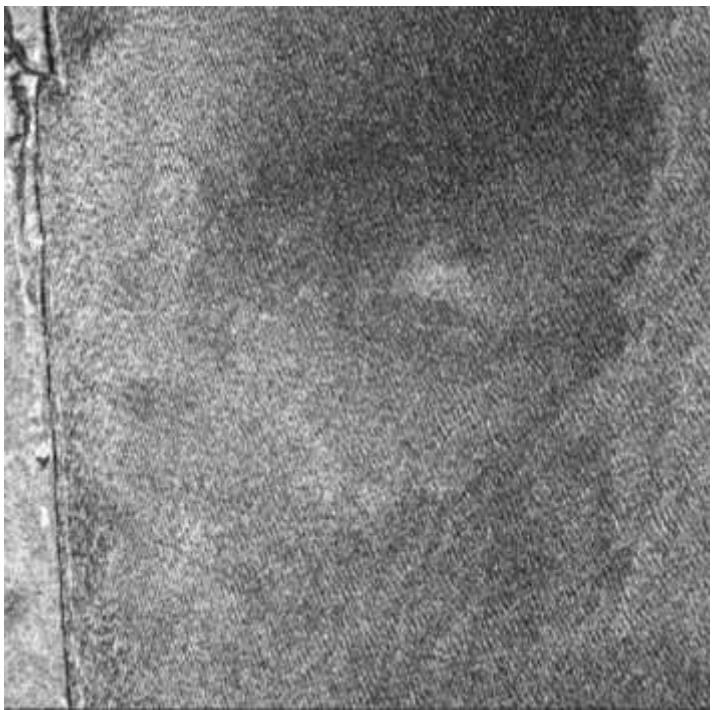

How do we estimate the depth?

CalcWavelengthGrid.m

```
[X,Y,Lambda,Alpha,Quality]=CalcWavelengthGrid('SubSubImage.tiff',10,2500,500);
```

PixelToGroundCoordinates.m

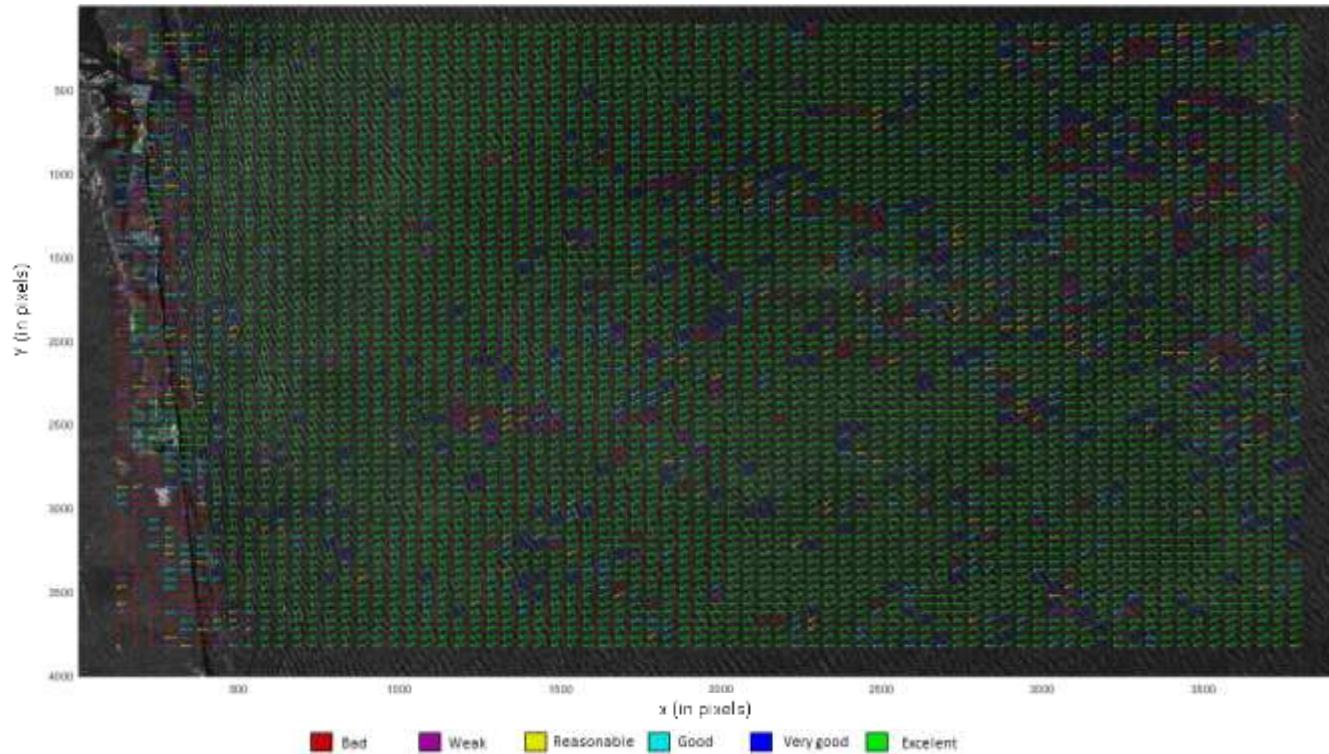

```
p=10;  
X=X./p;  
Y=Y./p;  
  
Grid_point_initial_X=7902;  
Grid_point_initial_Y=2004;  
[m n]=size (X);  
  
xp=[reshape(X+Grid_point_initial_X,m*n,1) reshape(Y+Grid_point_initial_Y,m*n,1)];  
  
[xg]=PixelToGroundCoords (xp, 'gcp_subimagem_76d6.txt');
```

Bathymetry.m

➤ 1st Selecting wavelengths with Quality>3

```
Lambda_3=Lambda;  
Lambda_3(Quality <3)=NaN;
```

Bathymetry.m

➤ 2nd Estimation of the bathymetry with Linear Wave Theory

```
h=zeros(size(Lambda_3));  
  
for i=1:size(Lambda_3,1);  
    for j=1:size(Lambda_3,2);  
        if Lambda_3 (i,j) < Lambda0  
            h (i,j)= (Lambda_3 (i,j)./(2*pi)).*atanh(Lambda_3(i,j)./Lambda0);  
        else  
            h (i,j)=NaN;  
        end  
    end  
end
```

Bathymetry.m

➤ 3rd Application of tidal correction

```
load ('pred_ba_2019_2_1.dat');

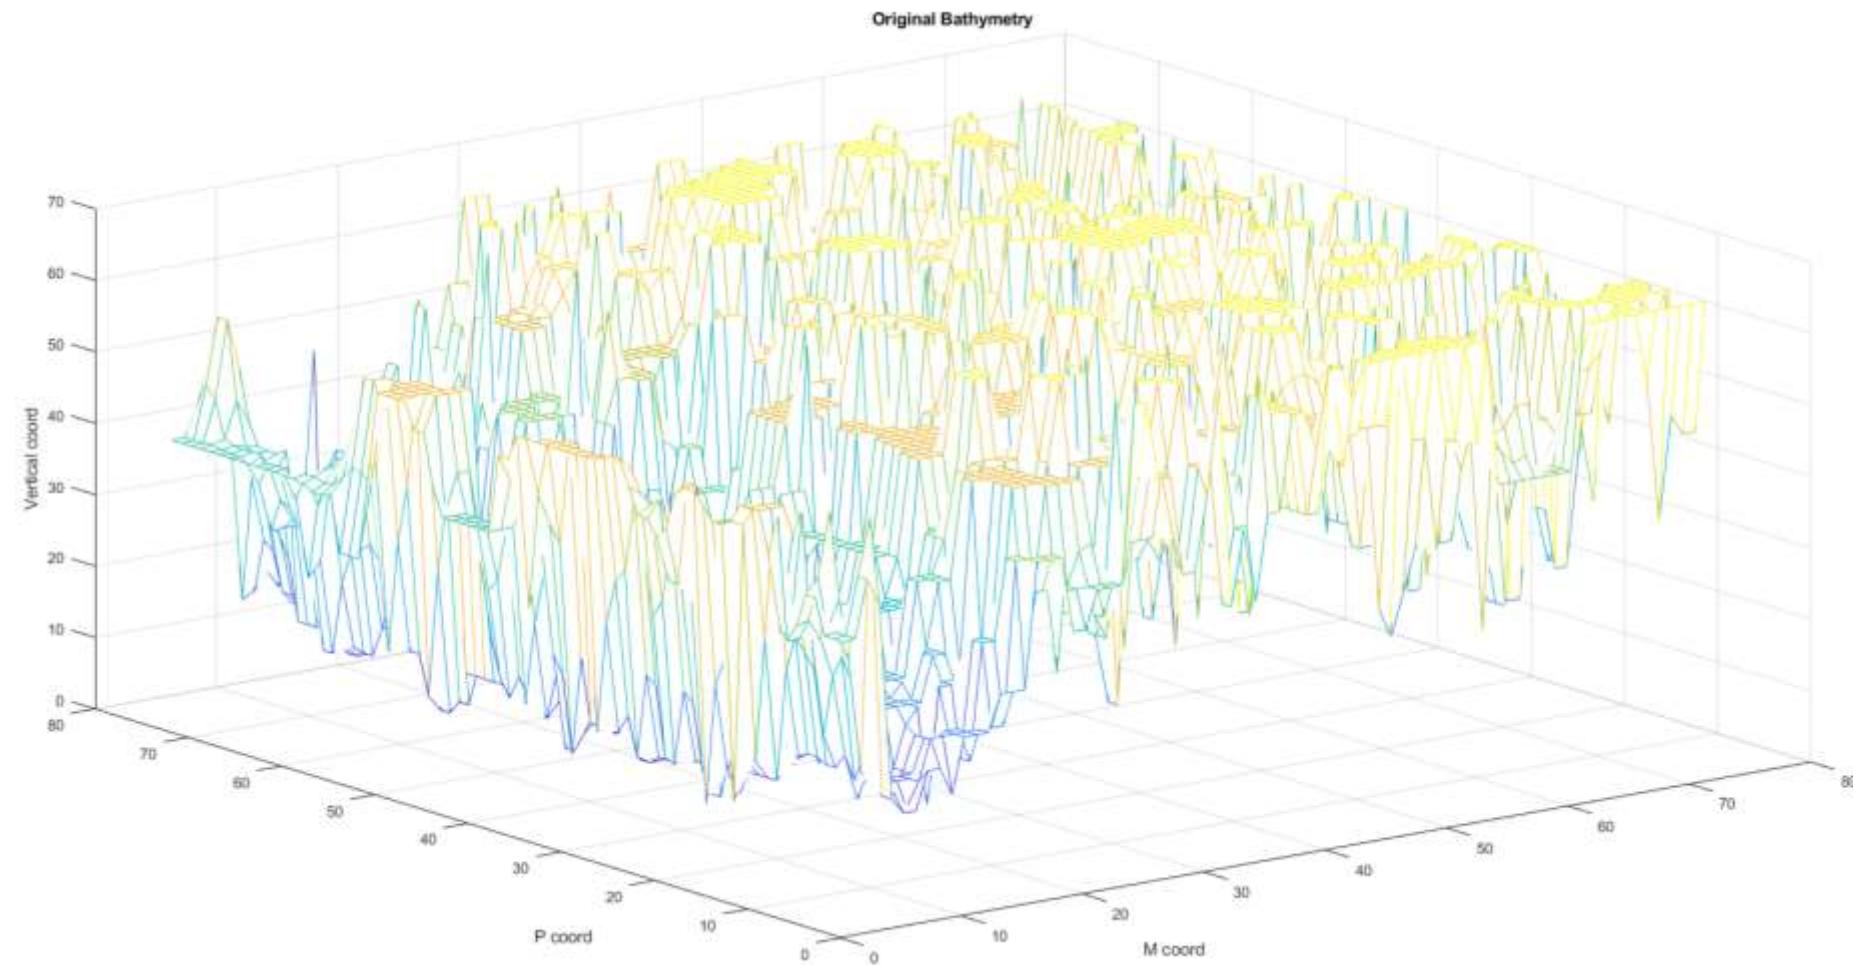

tide=pred_ba_2019_2_1(308,5);

h_def=-1*(h-tide);
```

Bathymetry.m

Bathymetry.m

➤ 4th Application of filter to obtain a smooth bathymetry

```
for q=2:size(h_def,1)-1
    for r=2:size(h_def,2)-1
        if isnan (h_def(q,r))
            h_def(q,r)=nanmean([h_def(q-1,r) h_def(q+1,r) h_def(q,r-1) h_def(q,r+1)]);
        end
    end
end

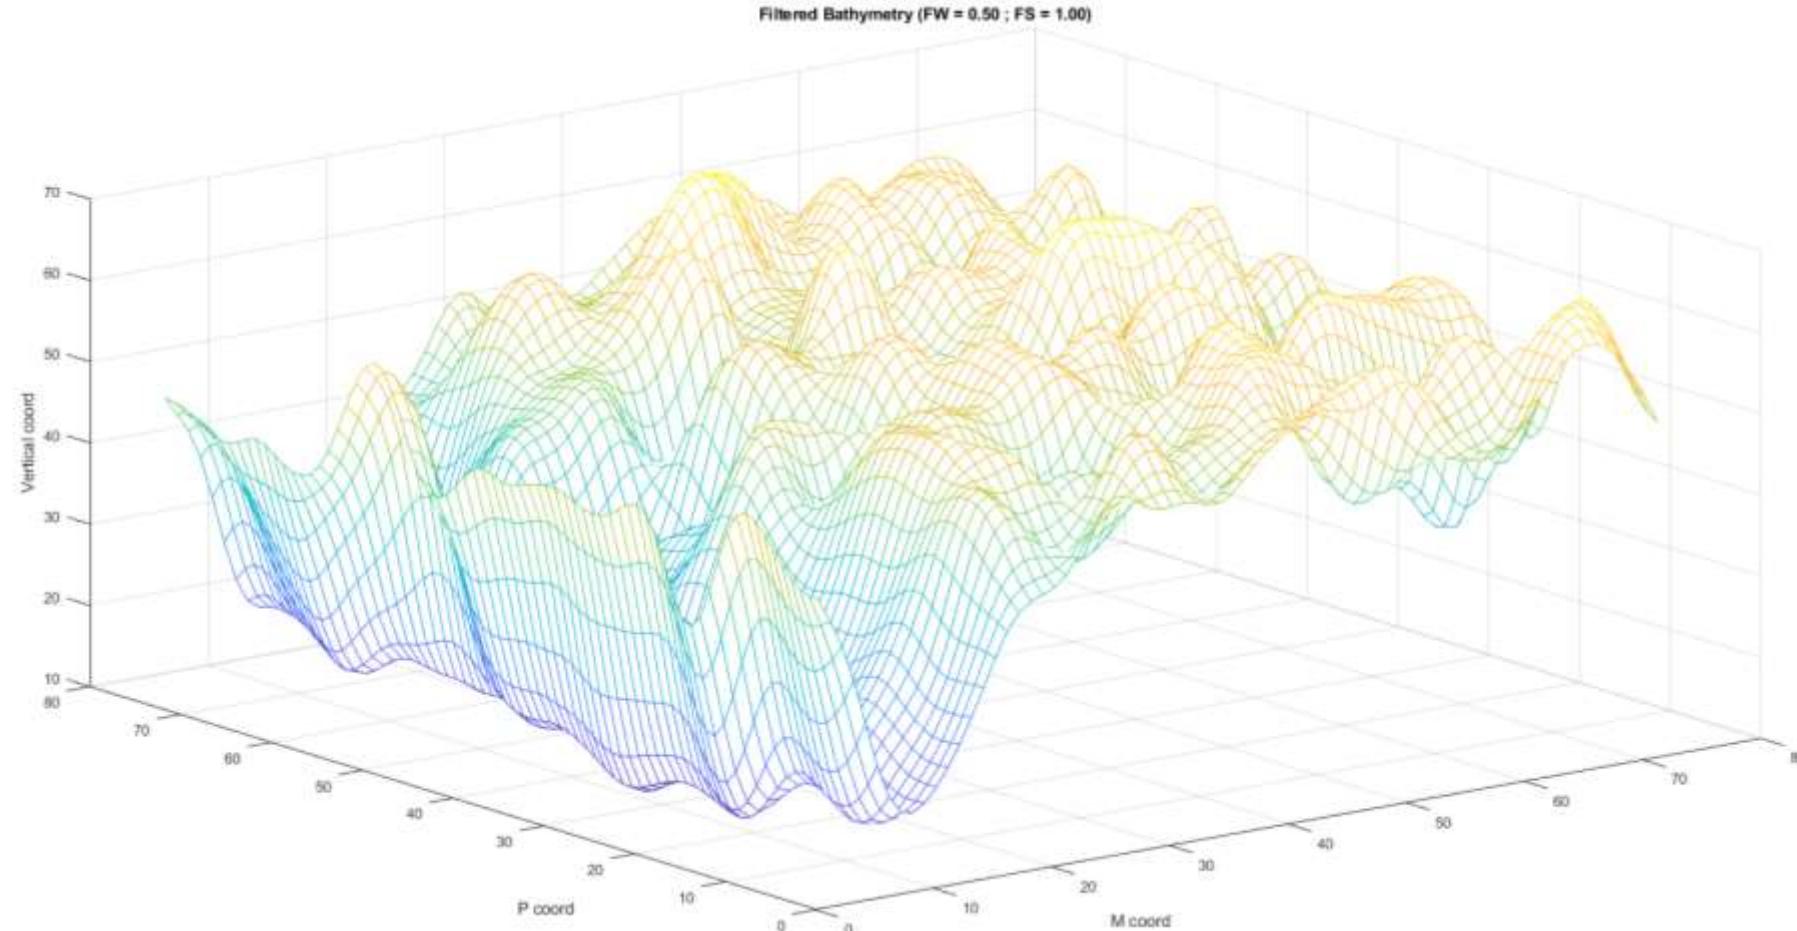

FilterWidth=0.5;
FilterSharpness=1;

h_defs=FilterBathymetry(h_def(2:end-1,2:end-1),FilterWidth,FilterSharpness);
```

FilterBathymetry.m

Bathymetry.m

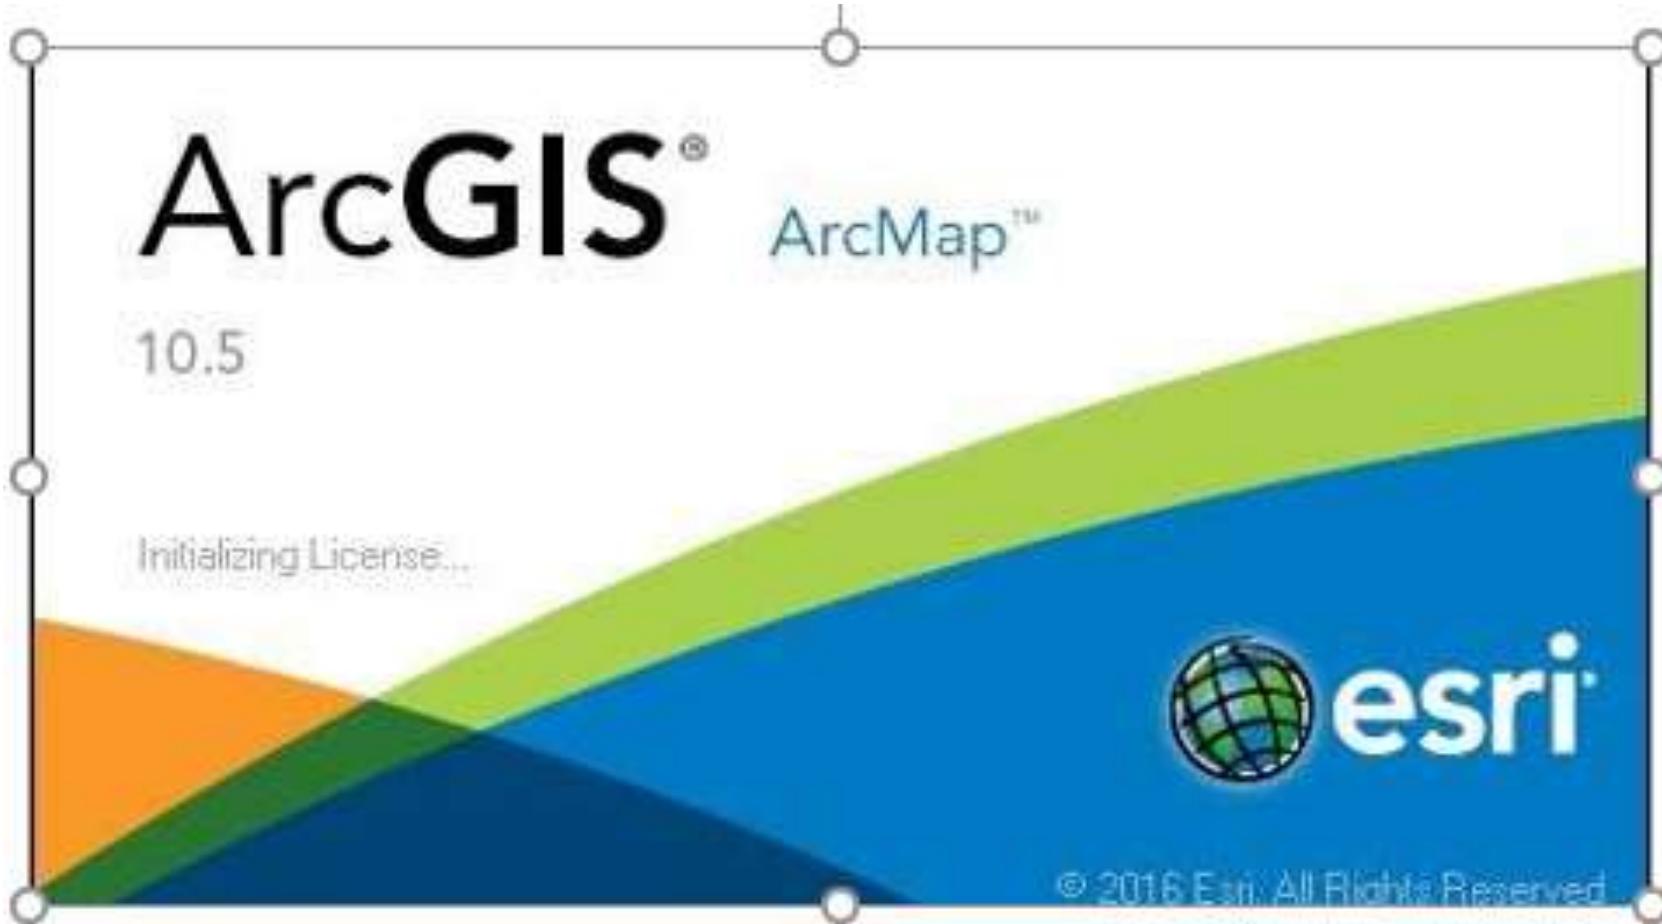

```
[mm nn]=size (h_defs);  
Z_s=[reshape(h_defs,mm*nn,1)];  
  
Xg2=[reshape(Xg,m,n)];  
Xgs= Xg2(2:end-1,2:end-1); Xgs2=[reshape(Xgs,mm*nn,1)];  
  
Yg2=[reshape(Yg,m,n)];  
Ygs= Yg2(2:end-1,2:end-1);  
Ygs2=[reshape(Ygs,mm*nn,1)];  
  
Bat_s=[Xgs2,Ygs2,Z_s];
```

How do we know if the result is realistic?

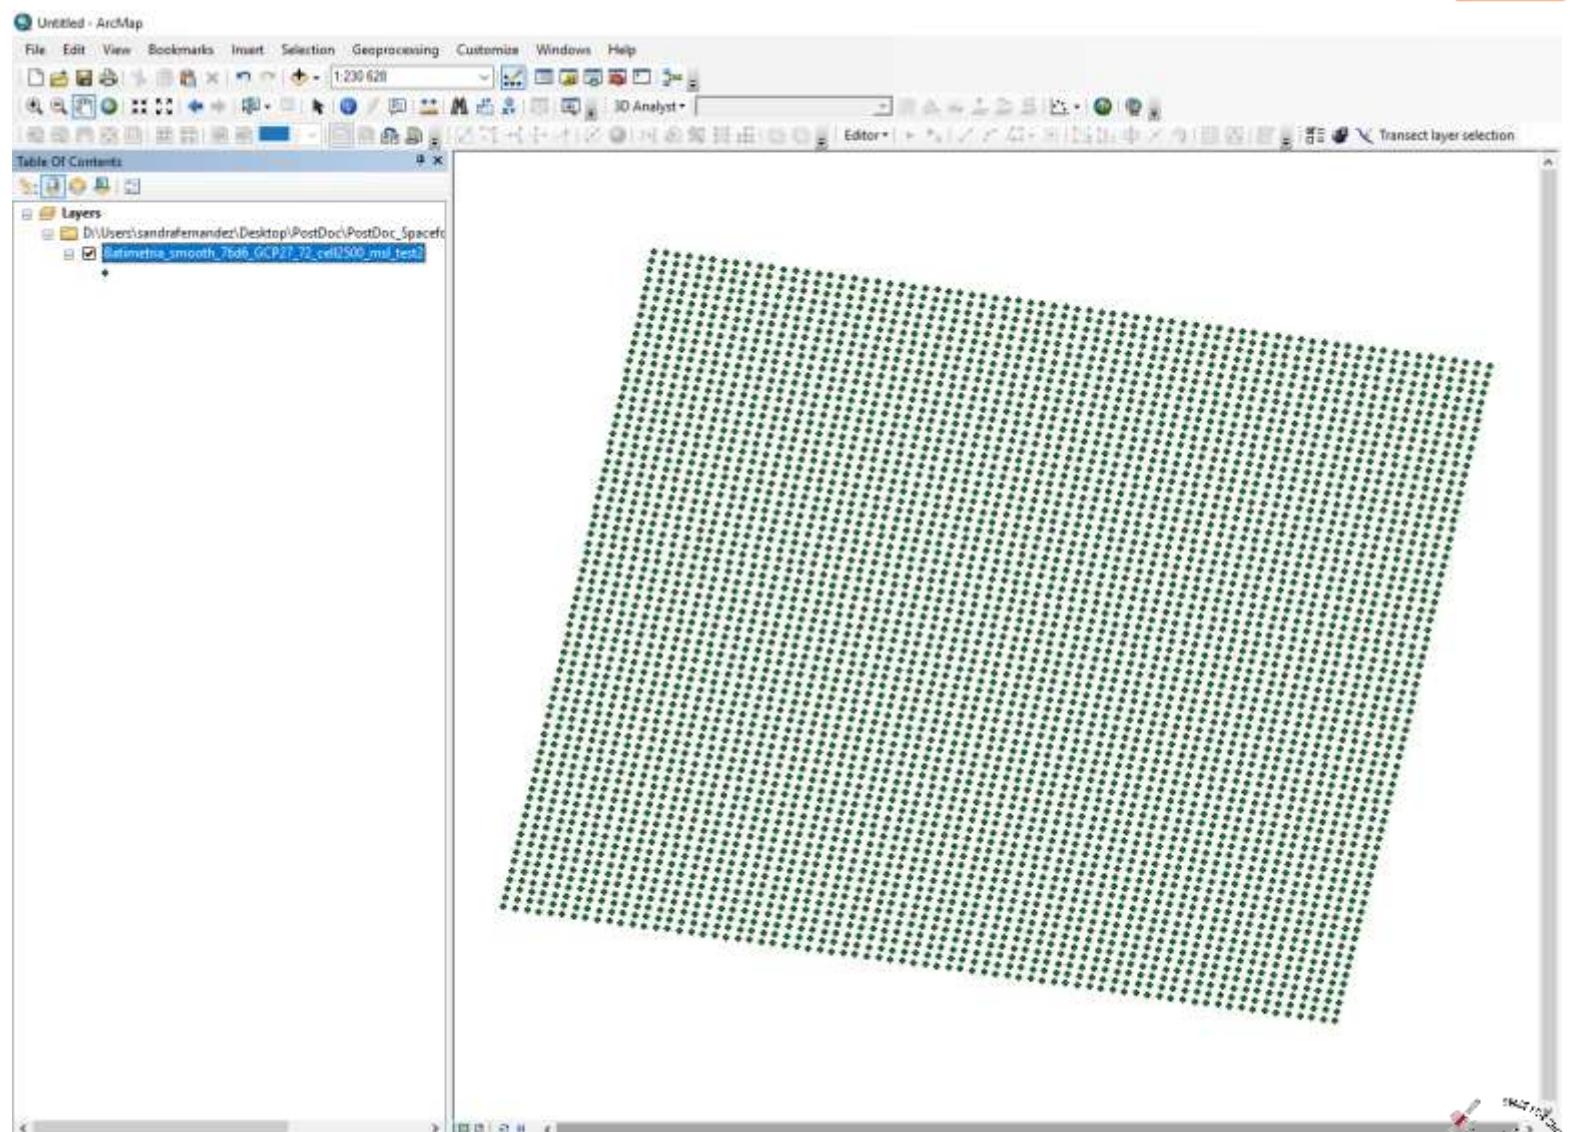

Bathymetry

Bat_s text file

➤ 1st Create a shape

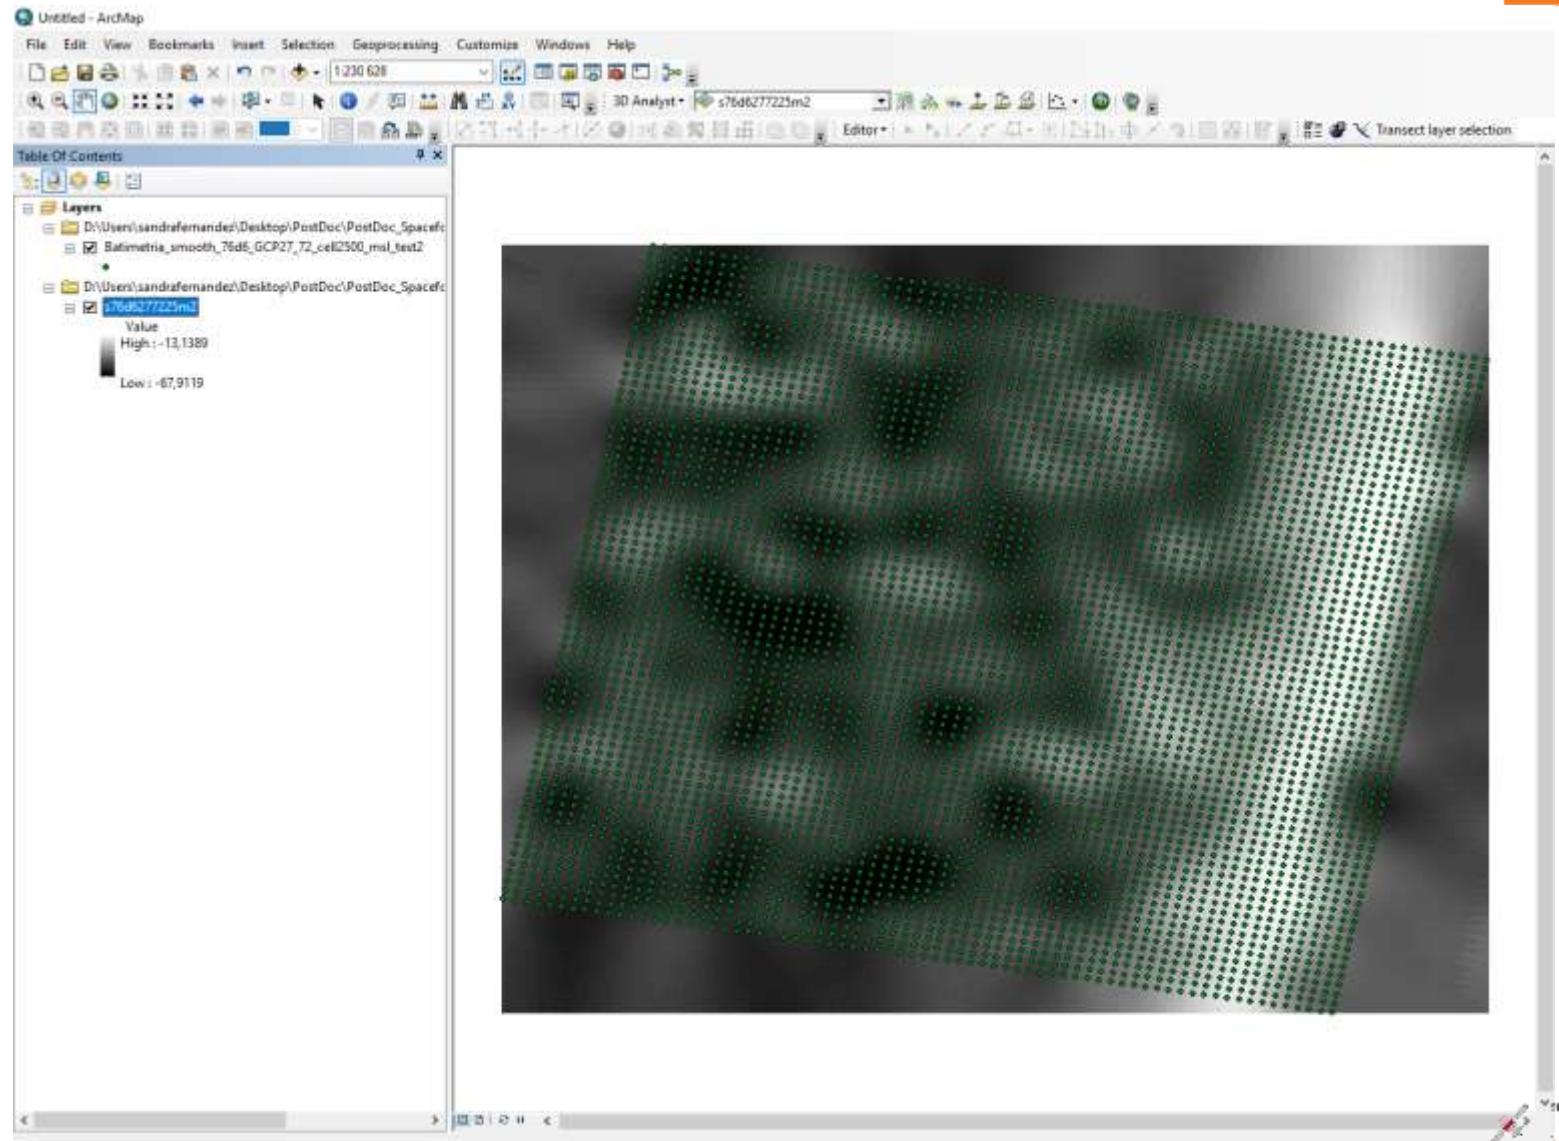

Bathymetry

Bat_s shape file

➤ 2nd Interpolate

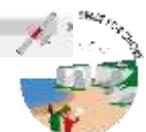

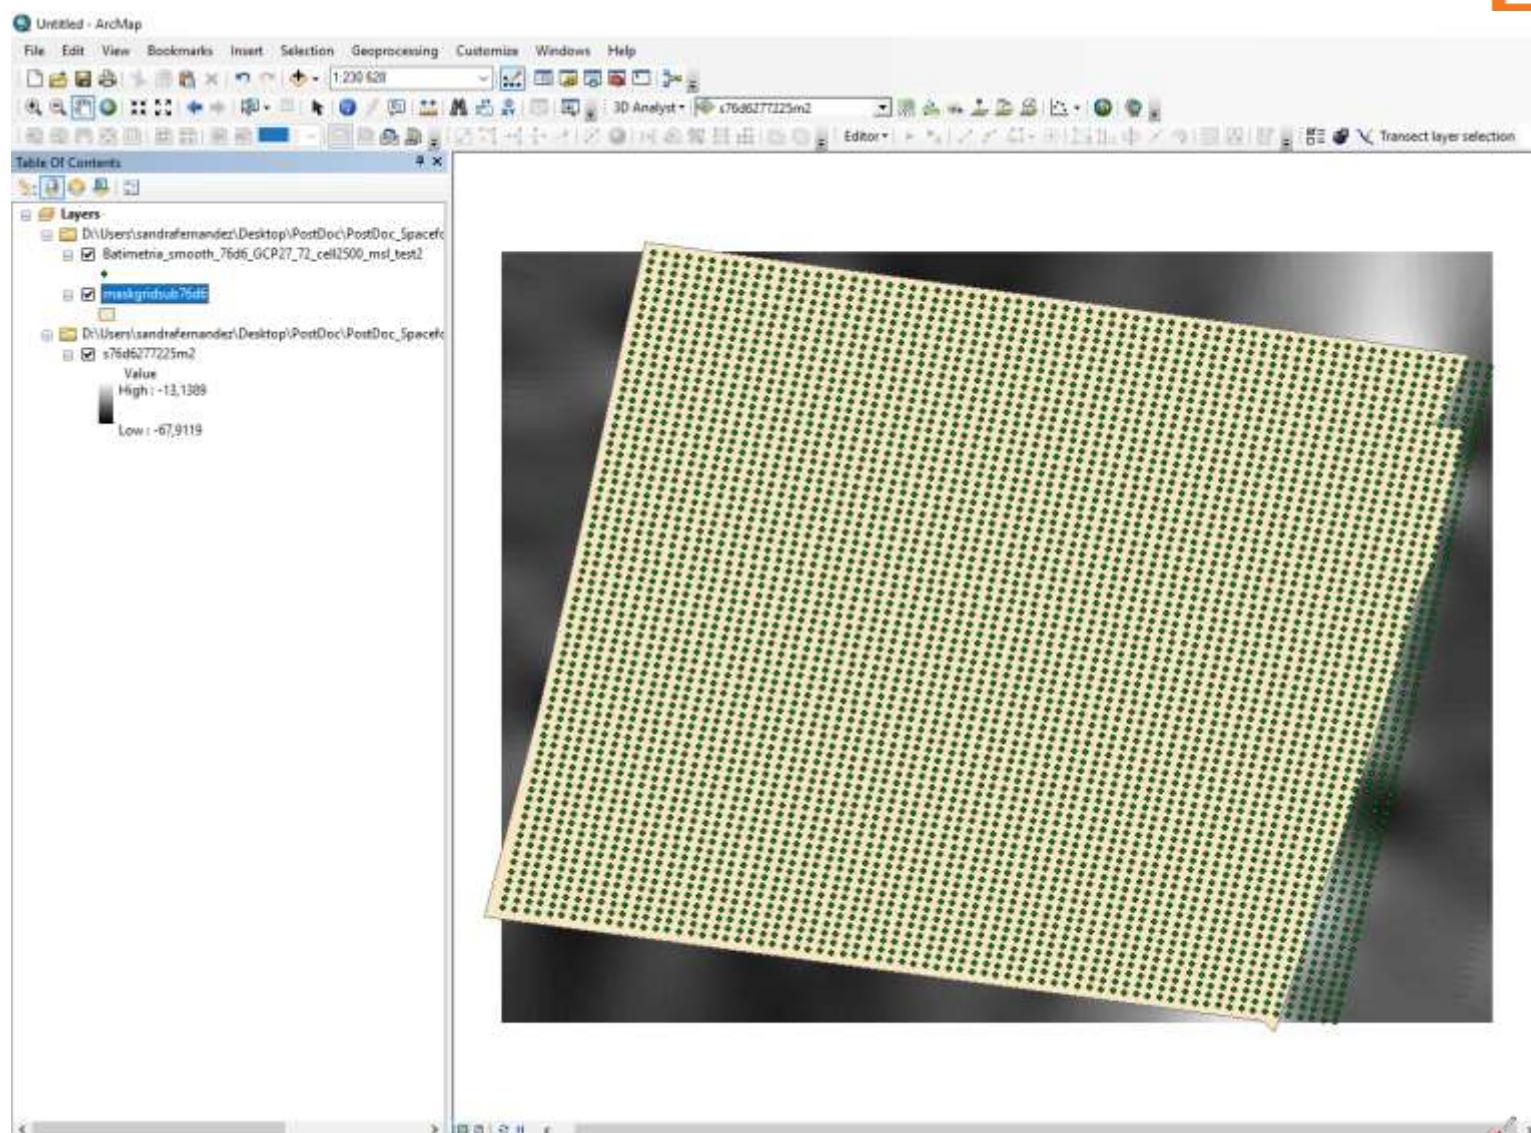

Bathymetry

➤ 3rd Extract the area of interest

Bat_s raster file

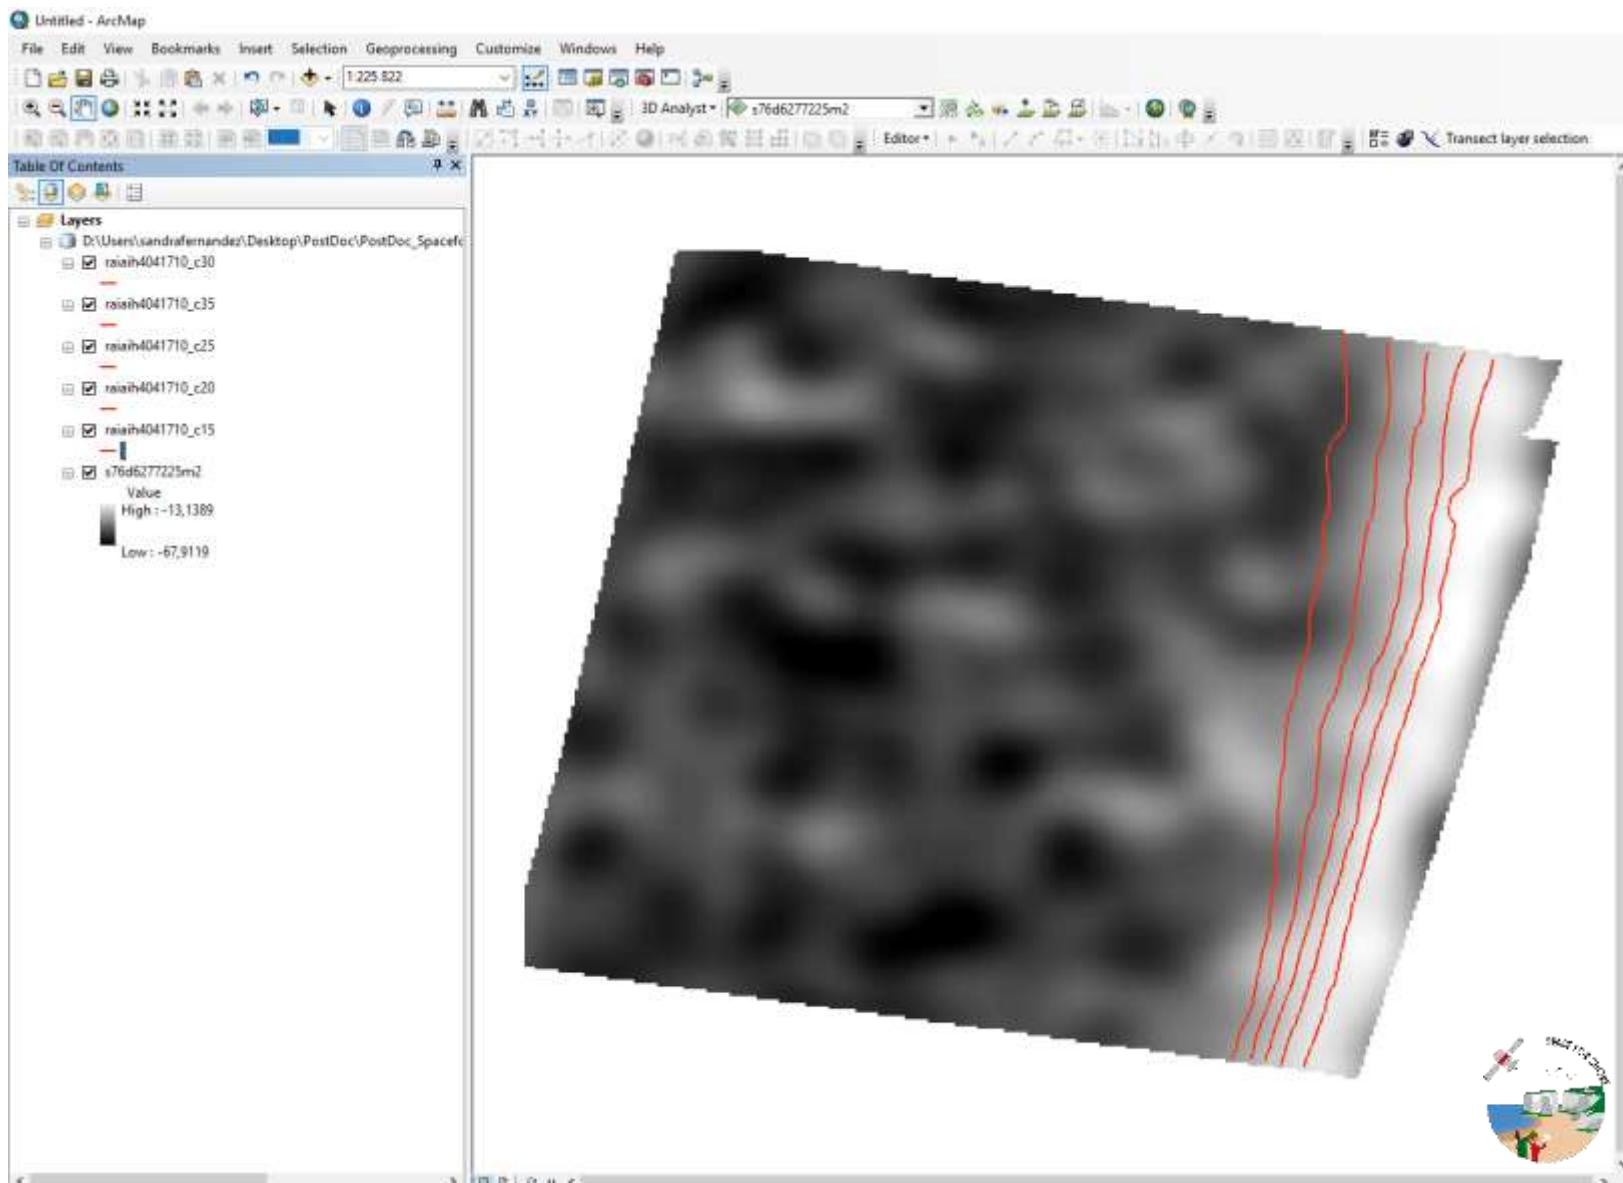

Bathymetry

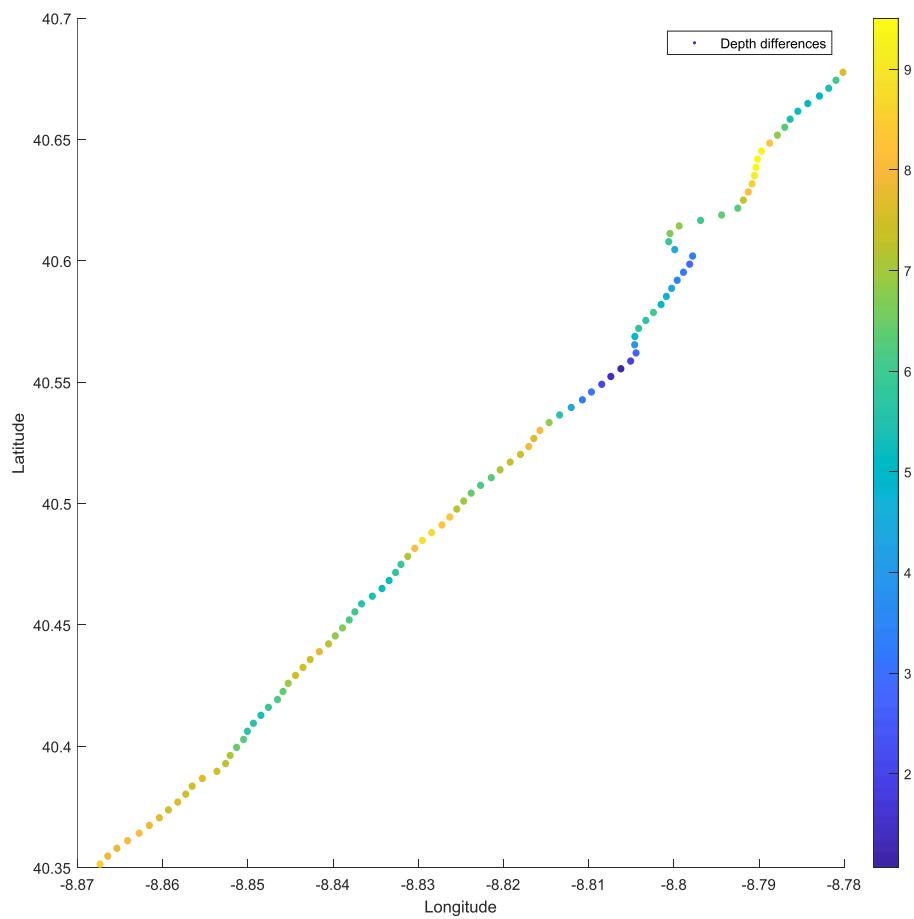

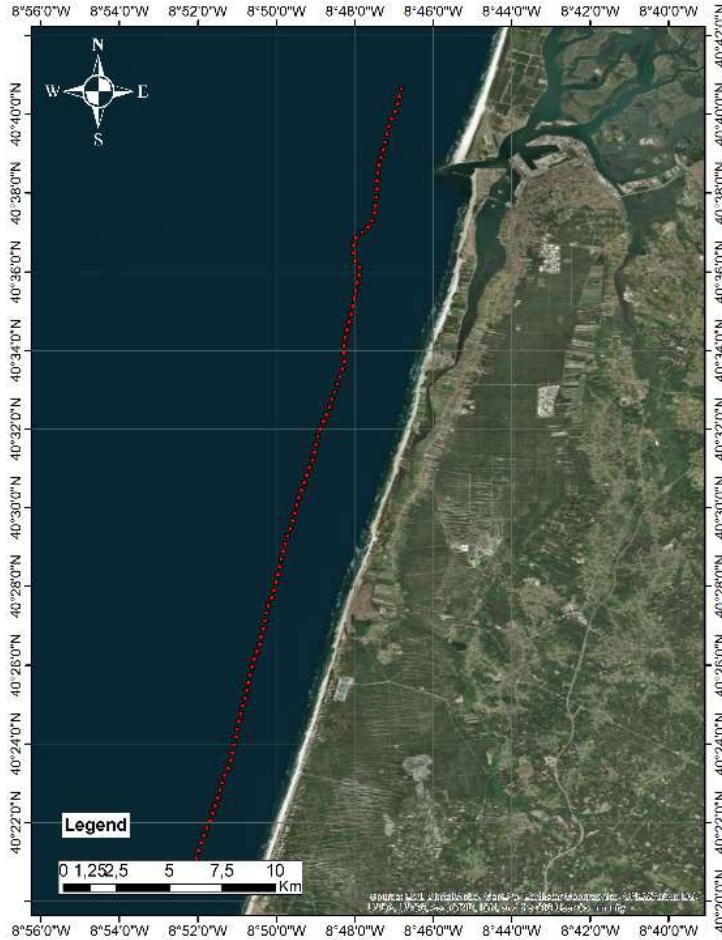

➤ 4th Extract the values of depth along measured isobaths

Bat_s raster file

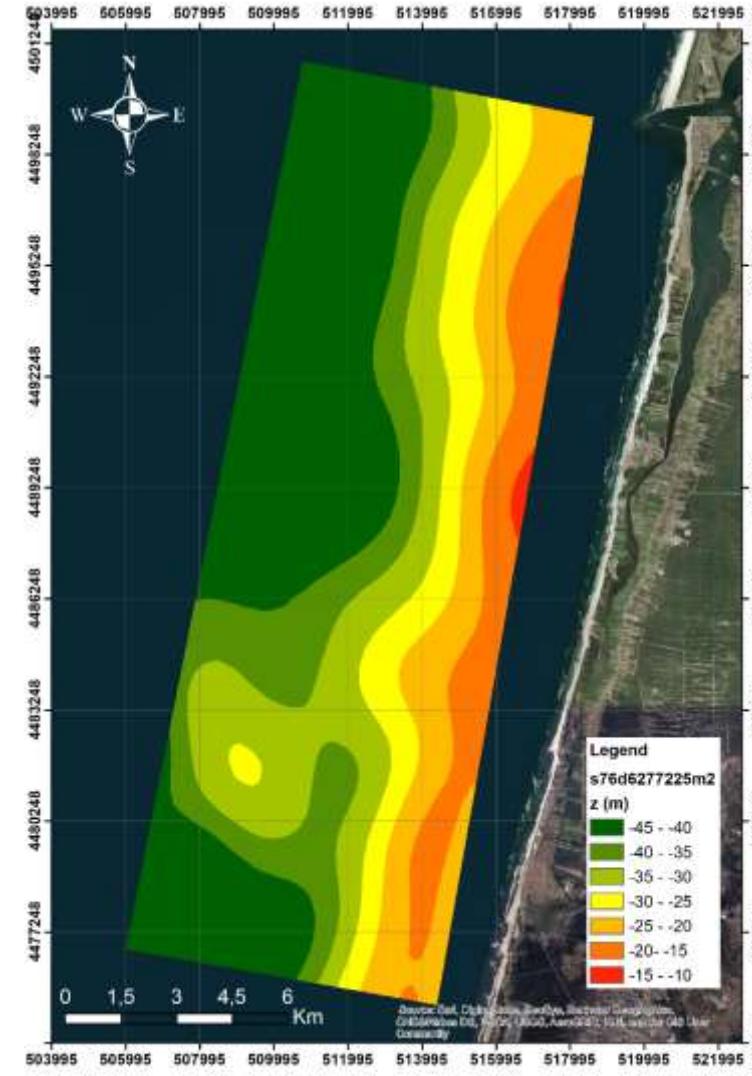

Bathymetry

➤ 5th Estimate the difference between measured and derived satellite depth

Bathymetry
